

MEMORANDUM FOR THE PRIME MINISTER:

2nd April, 1929

St. Lawrence Engineering Conference.

Attached is a memorandum from D.W. McLachlan reporting proceedings of the conference held between the Dominion and Ontario engineers to consider methods of developing the international rapids section.

It will be noted that arrangements have been made for examining in detail the Ogden Island scheme put forward by the Hydro-Electric Commission, and the Chrysler Island scheme which is the latest alternative of the Dominion engineers, and that consideration is also being given to the possibility and cost of the construction of channels, locks and side canals wholly on the Canadian side.
