ISRAEL GROFF, Elmira, Ont.

When Writing Mention Advocate

QUESTIONS AND ANSWERS.
Miscellaneous.

MOTH.

What is the inclosed moth? Is it harmful?
G. L.

Ans.—The moth is one of the Spingidae, or "hawk-moths." It feeds principally on the jimson weed and tobacco plants, but does little harm to any other kind of vegetation.

STALLION REGULATION.

1. Is there any law in Ontario at present to prevent unregistered stallions from travelling?

2. Or is there any legislation under consideration to that effect which is likely to be passed?
A. F.

Ans.—1. No.
2. By reference to "The Farmer's Advocate" for July 4th and May 30th, particulars will be found of the new Stallion Enrollment Bill, which became a law at the last session of the Ontario Legislature, and which goes into effect on August 1st next. After that date, no stallion shall stand, travel, or be offered for service until enrolled and a certificate procured, but registration as a pure-bred is not a condition of enrollment.

COCKED ANKLES.

Valuable Hackney colt, three years old, has cocked ankles. The ankles seem to be swollen on the inner side, as though it had been interfering badly.
D. B.

Ans.—Colts that show this weakness before having done any hard work are very liable to get worse when put to work. It may be caused by too much standing in the stable, in which case treatment will be more successful. Blister all around the fetlock joint once every month with two drams each biniodide of mercury and cantharides, mixed with two ounces vaseline. Cut the hair off. Rub blister well in. Tie so that he cannot bite the parts. In twenty-four hours rub well again, and in twenty-four hours longer, wash off and apply sweet oil. Let his head down now, and oil every day. Allow him a large box stall, and some exercise in a paddock, except during the time he is tied up to blister.

PENNY CRESS.

I am sending you a weed which I found growing in a hay field. Will you please send the name of the plant, and the best way to get rid of it? Is it a destructive weed to crops?
E. J. P.

Ans.—Though the specimen arrived flowerless, leafless, and in a desiccated condition, we feel fairly safe in identifying it as penny cress, a bad weed, especially in the West, but becoming quite a pest in many parts of the East as well. Hand-pulling and burning is probably the best way to stamp out stink-weed, or field penny cress in new localities and in small quantities, but when it is thoroughly established, more drastic measures must be adopted. They are all based on some method by which the seeds are covered up to make them germinate; then the young plants are destroyed with the harrow, cultivator, or plow, before seeds ripen. The land should be cultivated as soon as a fresh growth of the weed develops.

BLUEBOTTLE.

I have leased a farm on which there is 35 acres of wheat. In this wheat there is a weed very thick in places. I send you a specimen, and would like you to describe it. I have the privilege of drawing the straw home. Is there danger in so doing of infesting my own place?
COOKSTOWN FARMER.

Ans.—The weed is an annual, Centaurea cyanus, the parent of the bluebottle, cornflower, bachelor's button, or bottle-of-all-colors of the flower garden. It is said to be a common weed in some English grain fields, where the farmers' opinion of it is indicated by the names they give it—witch-thimbles and hurt-sickle—but the above is the worst report in an Ontario grain field that we have had of it. It bears a plumed seed, much of which is likely to be blown out by the thrasher with the chaff. From your home barn, some of the seed stands a good chance to get back to the fields. Can you not hand-pull it, and remove it now?
J. D.

CANUCK BRAND

Baby Chick Feed and Scratch Feed

Are made up from pure grains in proper proportions to secure best feeding value and most satisfactory results. Write for full information and give name of your feed dealer.

The Chisholm Milling Co'y
Toronto, Ontario
