

Hungry Hair

Perhaps your mother has thin hair! But that is no reason why you must go through life with half-starved hair. If you want long, thick, heavy hair, you must feed it. Feed it with a regular hair-food—Ayer's Hair Vigor. Well-fed hair stops falling out, keeps soft and smooth, and grows long and heavy. Feed your starving hair with Ayer's Hair Vigor!

BRISCO'S

DUMONT AND RIEL

Remarkable Double Death That Recalls the Northwest Rebellion That Cost Canada Many Valuable Lives.

Gabriel Dumont's untimely death at the age of 75, and the death of Riel's mother on the same day, is a coincidence that time recalls upon the names Dumont and Riel. Even at the time of the rebellion Dumont was credited with supplying the brains of the insurrection, Riel contributing the necessary fanaticism that drew to his side the Indians and half-breeds of the Northwest. Dumont was a more dangerous man than Riel, for he brought to the camp of the conspirators a cold-blooded cunning that cost Canadian lives. He was not carried away by his chief's wild imaginings, but fought desperately like a man with a rope around his neck. It was his boast that he would never be taken alive, and it is altogether likely that he would have killed himself rather than trust himself in the hands of the Canadian Government.

Dumont, the Buffalo Hunter.

History will reveal none of the motives of the Northwest rebellion, a picturesque treatment, those who could not be considered fools being squalid knaves, or both. Dumont was not a fool, though he assisted in organizing and was director of one of the most desperate enterprises in his history. He was born at Edmonton, of an Indian mother and a French-Canadian father, one of a numerous family. As a youth he was a buffalo hunter, and became an adept in the rather dangerous occupation.

His fine physique, his courage, and his half-breed ancestry made him a man of note, and by the time he had reached early middle age Dumont was a factor to be reckoned with in dealings between the whites and the Indians.

The Tempter of Riel.

In 1880 the Dumont family moved to South Branch and there founded a settlement, where Gabriel was chief. By this time he was reputed to be wealthy for a half-breed, a circumstance that gave him additional weight with the Indians. Personally, then, it is plain that Dumont had little reason to complain of the conditions that induced many of the Metis to rise in rebellion. Nevertheless he was chiefly responsible for inducing Riel to return to Canada in 1884, after his sentence of banishment had ended. To Riel he represented the whole Northwest as awaiting but his appearance to take up arms. The white settlers, he said, would join them, and the rising would be a general one. The Canadian Government would not dare resist the demands made upon it. Whether Dumont believed all he told Riel is open to doubt, but it is plain that he believed there would be little fighting, and a quick acceptance of the Riel terms. He put himself and Riel as the half-breed governors of the Northwest.

The Half-Breed's Demands.

Though Riel and Dumont were visionary and adventurers, and entitled to fight under no nobler flag than the skull and crossbones, they drew up a document setting forth the Indian grievances, and dignified it with the name of Bill of Rights. In this ultimatum, which was delivered to the Dominion Government, the following demands were made:

The Northwest to be sub-divided into provinces.

Half-breeds to be treated as the breeds of Manitoba.

Patents to be issued at once to settlers in possession.

Half a million acres of Dominion lands to be sold and proceeds used to establish half-breed institutions.

Reservation of a hundred townships of swamp lands for distribution among the children of the half-breeds in the next 120 years.

Grant of \$1,000 annually to support half-breed institutions.

Better provision for the support of the Indians.

The Government's Answer.

The Government's answer to this manifesto was to the effect that a commission had been appointed to enquire into the general subject of half-breed claims; and that any half-breed legally entitled to it could get a patent for his land. The Government promised that the ordinary method of surveying, i.e., laying the land out in squares, would not be followed, if the "breeds" were desirous of retaining their river-belt, and pictures he quoted from the Bill of Rights, it was considered very important by the rebels, and the Government's concession on the point was well calculated to allay ill-feeling.

The reply also exposed the illudent nature of the claims for treatment according to the practice adopted in Manitoba, for it asserted that the men making the demands were the same individuals who had already been settled with when they lived in Manitoba. They had been given their land there, and moved west, and now insisted that they should be re-established.

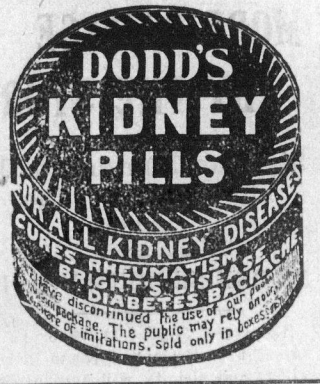

Dumont, the Lieutenant.

Before the serious nature of the situation was realized Riel had struck at Duck Lake and the fight was on. Dumont was his lieutenant who planned the actual fighting and forced upon the rebels such ideas of formation and discipline as they could understand. It was Dumont who, the night before the fight at Fish Creek, designed the plot to carry off Gen. Middleton and his staff, and Dumont is credited with aiming the shot that pierced Gen. Middleton's hat the day after. As soon as it was seen that the whites were not rising in support of the "breeds," Dumont recognized the hopeless nature of the rebellion, and made plans for his escape before it was too late. He got safely away, but Riel was captured and paid the penalty with his life. Twenty years longer Dumont lived, the keeper of a ferry that bears his name, respected, it is said, by the Indians and half-breeds, an example of clemency that should remain unique.

Cause and Effect.

Mrs. Wedgman—"I don't see why you can't come home sober once in a while. My first husband never drank a drop."

Wedgman—"Thash all (hic) ri', m' dear. He didn't (hic) have 't listen 't your talk 'bout your (hic) first husband."

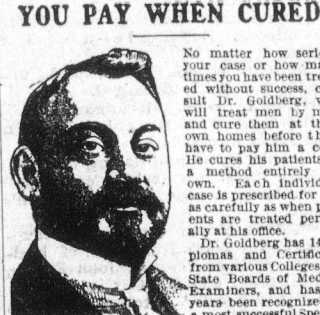

Titles in Germany.

The question of title is one of the most delicate in Germany, a fact of which the stranger is not so constantly reminded in intercourse with the people, particularly with the women. Frau Professor, Frau Director, Frau Doctor, are most particular about their husbands' titles being attached to their own names, but when it comes to military circles it is different, and both men and women protest vigorously against this sharing of titles. Lieutenant von B. objects to having his wife addressed as Frau Lieutenant, which title belongs as well to the wife of Lieutenant Schmidt or Hart of a less aristocratic regiment.

MEN CURED

HEALTH AND MANLY VIGOR RESTORED
YOU PAY WHEN CURED

No matter how serious your case or how many times you have been treated, without success, consult Dr. Goldberger, who will treat men of all ages and cure them at their own homes. He has a special method of curing all cases of Prostatic Trouble, Blood Poison, Early Decay, as well as Bladder and Kidney troubles, and restores health and vigor to men of all ages. He has cured thousands of men of all ages, and his name is known all over the world. He has a special method of curing all cases of Prostatic Trouble, Blood Poison, Early Decay, as well as Bladder and Kidney troubles, and restores health and vigor to men of all ages. He has cured thousands of men of all ages, and his name is known all over the world.

The Most Curious Known Animal.

The most peculiar and remarkable animal in the world is the Lanthornichus paradoxus, the famed egg laying mammal of Australia. It is shaped like an otter, has fur like a beaver, is web footed like a swan, has a bill like a duck and a tail like that of a fox. It is the only known fur covered creature that lays eggs. A corresponding oddity among feathered birds would be a bird that brought forth its young alive.

Do You Want to Know What You Swallow?

There is a growing sentiment in this country favor of the use of known medicines. It is but natural that one should have some interest in the composition of that which he or she is expected to swallow, whether it be food, drink or medicine.

Recognizing this growing disposition on the part of the public, and satisfied that the vast majority of known medicines are of a low quality, Dr. R. V. Pierce, of Buffalo, N. Y., has taken time to compile a list of all the ingredients entering into his leading medicines, the "Golden Medical Discovery," the "People's Liver Invigorator," "Stomach, Bile, Blood Purifier and Heart Regulator," also of his "Favorite Prescription" for weak, over-worked, broken-down, nervous and invalid women.

This bold and outspoken movement on the part of Dr. Pierce, has by showing exactly what his well-known medicines contain, and by publishing a list of all the ingredients entering into his leading medicines, the "Golden Medical Discovery," the "People's Liver Invigorator," "Stomach, Bile, Blood Purifier and Heart Regulator," also of his "Favorite Prescription" for weak, over-worked, broken-down, nervous and invalid women.

Same Thing.

"Rimer takes himself very seriously, doesn't he?"

"Yes, indeed."

"Most of his poetry is pathetic, isn't it?"

"That's what he calls it, but the editors say it's pitiful."

Men of character are the conscience of the society to which they belong.

"A CITY BEAUTIFUL."

That is what the New San Francisco is to be—Features of the Burnham Architectural Scheme.

"The whole city will be remodeled," declared Mayor Eugene F. Schmitz of San Francisco a few days after its destruction by fire and earthquake, when discussing the problem of its reconstruction. He added that the work of rebuilding would begin right at the water front, where millions of dollars would be spent, and that in the creation of a new city the so-called Burnham plan would be taken as a guide. When Daniel Hudson Burnham designed the court of honor at the Columbian exposition and superintended the building of the famous "white city" he little dreamed that he would one day be called upon to plan a city greater even than a world's fair and that the calamities of earthquake and fire combined would give him this opportunity. It is now believed that the rebuilding of San Francisco as a "model city" will be one of the blessings in disguise brought by fire and earthquake to the metropolis of the Pacific.

Mr. Burnham has been preparing himself for the execution of such a task as now lies before him for years. Born in Henderson, N. Y., in 1846, he early showed a bent for the profession of an architect. He studied at Yale and Harvard and Northwestern universities and when the Columbian exposition of 1893 came along was chosen chief architect and director of works of that great enterprise. Since then he has been in demand when civil improvement was in hand, has acted as chairman of the national commission for beautifying Washington and is also head of the commission which is creating a model civic centre in the city of Cleveland. It was natural that he should be called to San Francisco when that city set about putting in effect ideas of civic beautification. He built a bungalow on the Twin peaks, which gave him a view of the city from a height of 700 feet, and, with his assistants, spent months in developing the plans. The report was submitted only a short time before the visitation of the city by earthquake and flames. It was at first thought that it would require too many years and too much money to carry out the scheme, but now it is deemed possible that in its main features the project may be realized, for the old city has been destroyed, and why should not the new San Francisco be a "city beautiful?"

The Burnham plan provides for a civic centre, with the principal public buildings located upon it and the union station upon the city's chief radial line. It provides for a series of parkways, a boulevard encircling the shore line of the peninsula, an extension of the avenue leading to Golden Gate park and the building of a Greek amphitheatre on the Twin peaks, with a statue of San Francisco extending a greeting to the countries of the orient. In the rebuilding of the city as a whole there is now to be considered the very practical problem of construction that shall be as nearly as possible both earthquake proof and fireproof. Wider streets and plenty of open squares will lessen the danger from spread of fires. Earthquake dangers will be met by building steel structures of the kind best adapted to resist shocks. It is predicted also that monolithic concrete construction will be largely used in the steel structures the material forming the outer shell will be bound as firmly as possible to the skeleton. By re-enforcing the walls at the intersection of the girders with steel ties and by using masonry work of reinforced concrete it is believed to be possible to make a building so strong that a derrick, if one large enough existed, could take it by a corner and lift it out of its bed without changing its shape.

The Pastoral Navajos.

The Navajos are a pastoral, patriarchal, semi-nomadic people. Their whole culture and development centres in their flocks, says Scribners. Their reservation of 12,000 square miles is desert, broken with mountains and mesa. On the mesa and low mountains there are considerable areas of pinon and cedar, and on the higher mountains a limited area of beautiful pine forests. Over this region the Navajos drive their flocks. At the season when the slight rainfall gives even a scant pasture on the desert plains, the flocks are pastured there. As the pastures on the lower levels is both burned with the hot, scorching sun and exhausted with pasturing, the flocks are taken up into the higher mountains, where there is more moisture. Again as the deep winter snows come on the sheep must be taken down out of the mountains to escape them. During this time they are kept, on the wooded mesa, where there is less snow, and a plentiful supply of wood, which there is none on the plains below. Year in and year out the Navajo flocks are driven back and forth from plain to mountain top, mesa and foothills.

Not Always a Lobster.

"Do not judge a man too hastily when he gets into hot water," remarked the observer of events and things. "Others besides lobsters get in hot water."
