

TO UNLOAD A WAGON.

Nos. 2 and 3 take hold of the head of the stretcher, while No. 1 gets into the wagon; the stretcher is then gradually drawn out till the foot-wheels rest on the edge of the wagon. No. 1 jumps out of the wagon, and with No. 2 takes hold of the foot of the stretcher, No. 3 supporting the head. The stretcher is now gently drawn away one pace and lowered.

With four bearers Nos. 1 and 2 would lift the foot of the stretcher, while Nos. 3 and 4 lift the head. This applies to crossing a ditch or wall, as well as to loading and unloading a wagon.
