

varieties sent out by them have become known. However, the sound "ov" or "off" positively must not be spelled "ou" or "ow" as in Antonouka, Titowka, and for convenience we have used "ov" as in Antonovka, Titovka.

But one book, I believe, has been written on Russian Pomology, that by Dr. Edward Regel, Director of the Imperial Botanic Gardens at St. Petersburg, and published in 1868. This book was criticized severely, at the time of its issue, by some of the European journals; but I cannot help feeling that the critics did not take in a full view of the situation. Dr. Regel, in the fickle climate of St. Petersburg, was unable to test very many of the varieties he described, able only to describe them as received, and under such names as they were received by. The fact is, Dr. Regel did his full fair share towards the doing of a great work, and, as Mr. Budd observed, had this been followed up by the organization of a National Pomological Society, Russian nomenclature would now be in a very different state.

Mr. Shroeder, of the Agricultural College at Petrovskoe Rasumovskoe at Moscow, has very complete notes compiled from specimens and information received from different parts of Russia. These apples were, for the most part, received for trial on the College Farm, but I regret to say, that the unusual cold of the winter of 1877 and the cold clay soil upon which they are planted has been against them.

This collection was very large and contained the greater part of the best apples of the steppe climates. It is much to be regretted that these notes of Mr. Shroeder's, the work, in fact, has not been published. Mr. Shroeder has not visited the orchards from whence the grafts and fruits were obtained, yet his notes we found singularly exact. Such was the opinion we gradually formed as we continued our work in the Russian orchards.

Pomology is a neglected science in Russia. What has been done seems to be local individual work, not united work. Strange this neglect on the part of a Government which has founded such Botanic gardens, a Government which has done such noble work for future generations in its Forestry Department.
