## Here Is A Splendid LANTERN

MODEL 2-1 (Incandescent)

### VICTOR PORTABLE STEREOPTICON

For Standard Lantern Slides

**T**HE Mazda-Nitrogen lamp used in this Model is the very latest development in incandescent projection lamps: The illumination produced by the highly concentrated filament in this lamp is intensely powerful and, with the aid of a perfect mirror reflector, projects an extremely brilliant and evenly lighted image on the screen.

Setting-up merely requires inserting the globe in the lamp house, attaching the carrier and projection lens. Connect to any lamp socket, on any lighting circuit of 6 to 125 volts, direct or alternating current. Turn on the current, centre the lamp, insert a slide, focus, and all is in readiness for an exhibition of any length.

Lenses furnished to give any size picture twelve feet wide, or smaller, at any distance twenty to one hundred feet from the screen.

#### PRICE

**Model 2-1 Victor Portable Stereopticon**, including one special concentrated filament 400 watt Mazda-Nitrogen lamp, condensing lenses, projection lens, 8 feet wire connection, slide carrier, \$48.00. With Leatherette carrying case, \$56.00. **Carriage Extra.**

Acetylene or carbon equipment may be easily attached to this Lantern.

Write us for particulars.

*We can supply B. and L. Lanterns, Screens, Extra Lamps, Extensions, etc.,  
Slides and Lantern Lectures*
