The name "Simonds, Cross-Cut Ground," on a cross-cut saw means that that saw will cut 10% more timber, same time and labor, as any other brand of saw made to-day. This is the best statement, but one which we can't back up with any other evidence. The name "Simonds, Cross-Cut" is a guarantee of the quality of the blade. The operation of the blade is the only thing that counts. The operation of the blade is the only thing that counts. The operation of the blade is the only thing that counts.

Don't Waste Money on Experiments

For sixty years we have been steadily bringing the quality and efficiency of Gilson Products up to their present standard, recognized by men of sound judgment and experience—successful men—as representing the greatest value offered to-day. WE HAVE PAID FOR YOUR EXPERIENCE

Gilson Products Standard of the World

GILSON ENGINES

When you buy a Gilson Engine you buy Reliable Power plus Service. Further, you get exclusive patented features, such as the Gilson carburetor, which eliminates cranking in starting—friction clutch pulley with interchangeable rims of various sizes—efficient speed change—reliable high tension ignition system—large surplus over rated horse-power, etc.

A smooth running, dependable motor, that will yield you the maximum power at minimum cost, day in and day out, all the year round.

THE GILSON ENGINE DOMINATES THE FIELD

GILSON SILOS

A Gilson Hilo Silo will pay for itself the first six months you use it. Thereafter it will continue to make money for you, year after year, at no additional expense. The Hilo Silo sets newer, higher standard in silo construction. The material used is Imported Long Leaf Southern Yellow Pine—the one wood endowed by nature with all the requisites of silo service. This wood costs twice as much as the woods used by other manufacturers. The doors are all interchangeable—perfect fitting in a reinforced door frame, with patented lock. The staves are tongued, grooved and bevelled on both sides and ends, making a perfect self-draining joint. The Hilo Silo is truly called THE MONEY-MAKER AND THE MORTGAGE LIFTER.

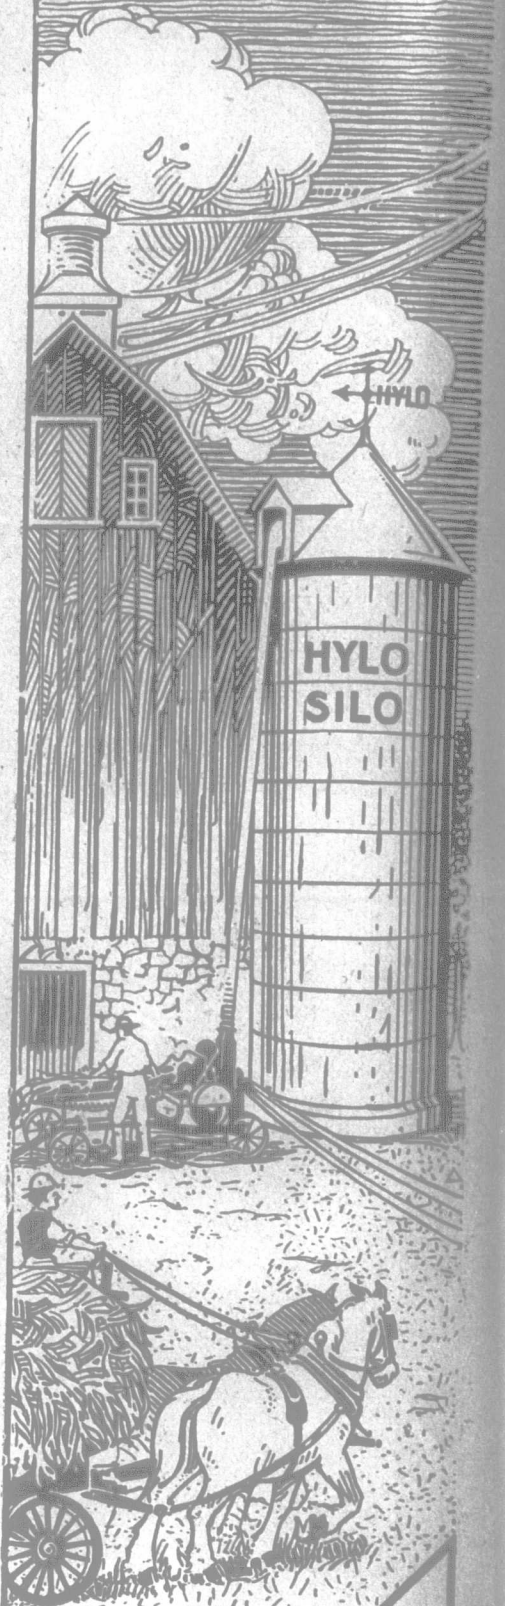

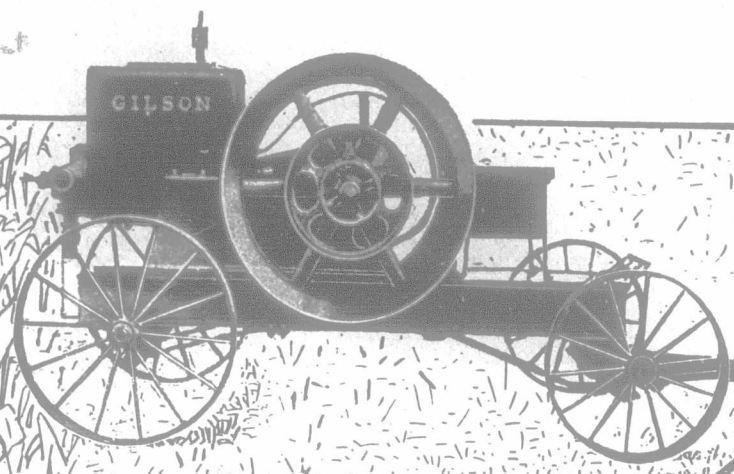

GILSON SILO FILLERS

We guarantee every Gilson Ensilage Cutter to cut and elevate more ensilage with the same power than any other blower cutter. A 4 h.-p. engine will operate the small size successfully. The Gilson Cutter is made entirely of steel and iron—with the exception of the feed table. The main frame is a solid piece of semi-steel—the bearings cannot get out of alignment, whether the machine has been used one year or ten years. The Gilson Ensilage Cutter is the result of immense resources and facilities focused in a steady effort toward improvement. That is why there is no comparison between the Gilson Cutter and other makes, and why the maximum output of the Gilson factory is sold out every year long before the corn-cutting season is over.

MR. G. MORGENROTH, of Tavistock, Ont., writes: Gentlemen,—I have found my 8 h.-p. Gilson Engine, Gilson Ensilage Cutter and Gilson Hilo Silo to be indispensable, and I believe that each represents the greatest value in its line. I have had my Gilson Engine three years, and it has given me such perfect satisfaction that last year I purchased an N-13 Gilson Ensilage Cutter, and a 12x36 Gilson Hilo Silo. We filled our silo in 10 hours, lapping one sheaf over the other, and the engine handled the cutter with ease. We found it impossible to plug the pipe, although we tried. I have no waste in my silo, and I have no trouble in getting the ensilage loose from the walls, and it does not freeze more than two inches, while in cement silos I have seen it frozen a depth of four feet. My ensilage is sweet, and of a nice color, while ensilage I have seen from cement silos is not as nice in color, and is sourer than mine.

Simonds Steel is the only steel which we are sure will take a temper to hold a cutting edge longer than the ordinary saw. The illustration shows a Simonds Cross-Cut saw, No. 325, with a hollow back instead of a straight back. When you buy a saw it will pay you to get a Manufacturer's Brand Saw, with the name "Simonds" on the blade, at about the same price as you will pay for a low grade Special Saw. Ask your dealer for the Simonds Cross-Cut Saw, and write direct to the factory for further particulars.
