

BILLY ROSS TALKS

He Has Great Faith in the Properties of East Kootenay.

HE HAS GREAT EXPECTATIONS

Thinks There Will be a Boom Equal to That of Rossland Around Fort Steele—Follower of Some of the Properties Around That Camp.

Genial "Billy" Ross, well-known in Rossland three years ago and now practicing law in Fort Steele, like all old Rosslanders, takes a great interest in the progress of the camp, and Friday, on his return from a trip to the Boundary country, he visited the city, to see how it looked. Needless to say, he was pleased with the appearance of the camp.

Mr. Ross said he had just made a flying business visit through the Boundary where he found the roads in very poor condition, owing to the incessant rains, nevertheless there is a great deal of traffic between the Boundary towns and outside supply points. The approaching completion of the railway and consequent mining activity is responsible for a considerable boom in general business in all the district, while the townsite boomer and real estate man are making hay. Greenwood and Grand Forks impressed Mr. Ross very favorably.

"Rossland is already a great camp," said Mr. Ross, "and the Boundary is going to make a name for itself, but still I pin my faith to East Kootenay and the Fort Steele district, and I know that when the mineral and other resources of that part of the country become more generally known, there will be a boom at least equal to that which resulted in the development of the Rossland mines. We have the biggest bodies of high grade ore in the province, and, in general, the highest values, while any kind of mineral the investor may fancy is to be found in ending quantities. When this season is past you will find that East Kootenay, taking one consideration with another, has made greater progress than any other district."

Fort Steele, Mr. Ross informed the interviewer, is reaping considerable benefit from the large amount of development work in progress on properties in its vicinity. Going on to speak of some of the big showings of the district, he gave a general idea of the work going on throughout the Fort Steele district. On Boulder creek, a tributary of Wild Horse creek, the Big Chief group, which has immense bodies of free milling quartz, and from which assays running as high as \$14,000 are obtained, is under option to an eastern syndicate, represented by E. J. Walsh, for a heavy price, and will probably be developed on a big scale. The Dupont group, on the same creek, has also very large bodies of free milling quartz, and is being systematically developed. Between these two groups is located the Little Chief group, which is being worked by Mr. E. C. Egan, who holds it under option. Very satisfactory results attend development on this property. On Sheep creek, near the headwaters of Wild Horse, there have been discovered recently very large deposits of copper ore on the Brittle Silver and John Bull groups. On the Tontine group, south of the Big Sheep, a big vein of concentrating ore, carrying good values, is being developed.

On Bull river and Sand creek there is a number of very promising claims. The Chickamoon Stone, has been well developed to a considerable depth, and shows every indication of being a permanent and valuable mine. Assays on this property run high in copper, gold and silver. The Empire, on Sand creek, has a big copper vein, which is to be developed forthwith.

The Dibble, a high grade silver proposition, near Fort Steele, will probably resume work this fall. At Kimberley there is great activity, owing to the building of a branch from the Crow's Nest railway. Here are located the North Star and Sullivan groups, having nearly the largest bodies of galena in the province, and the Stenwinder, with a body of pyrrhotite ore 150 feet wide, averaging \$12 in gold. There are other properties at Kimberley which promise to show equally good results with development.

On Luke creek there are several big bodies of galena, and also a number of copper veins of considerable promise. To the north, on Low, Macdonald, Horsethief and Toby creeks is a copper belt that is attracting the attention of many big investors.

On Tracy creek highly satisfactory results attend development work on the Estella, Golden Fleece, and other properties. The advent of the Mackintosh syndicate into the Windermere camp, and the shipments from the Delphine group, and the big bodies of high grade copper and silver ore uncovered by the owners of various claims in the neighborhood, have enlivened the mining men of that section, and active work is in progress on a great many properties. Windermere, as a result, bidding fair to become a big producer of ore in the very near future.

Questioned regarding placer mining on Wild Horse creek, Mr. Ross said the only work at present under way is being done by Chinamen. One syndicate is making good pay on a lease of hydraulic ground, while a number of "snipers" are working over the old diggings, and taking out, in the aggregate, considerable gold.

Mr. Ross leaves for Fort Steele this morning.

ROAD TO THE YELLOWSTONE.

It is Approaching Completion—A Strike on the Queen.

M. W. J. H. Patterson has just returned from a visit to Iron Mountain, where he has been looking after the assessment work on a claim in which he is interested. This property is located three miles from the famous Yellowstone mine. Mr. Patterson reports that excellent progress is made on the wagon road which is constructed from the Nelson & Fort railway, at Salmo, to the Yellowstone, a distance of 12 miles. About 10 miles of this road is finished, and the remainder is in such a condition that the 70 men at work upon it will be able to complete it in about four weeks. It is a splendid road, with such easy grades that a bicycle can be ridden over it. It will be used by the company, at first, to haul in

a large power plant which is to be installed on the Yellowstone. The government contributed \$3,000, and the company operating the Yellowstone, the remainder of the cost of the road. The Yellowstone, Mr. Patterson says, is the banner one of that country. There is considerable work in progress in the vicinity of Salmo on different mining properties there. The completion of the road to the Yellowstone will give improved access to a number of properties and be of considerable benefit to the district.

A strike has been made on the Queen, a property adjoining the Yellowstone. At a depth of 60 feet in the shaft a find of ore that goes \$60 to the ton has been made.

PAY ORE IN DEER PARK.

It Has Been Found While Exploring the Surface.

News of considerable importance to shareholders in the Deer Park transpired Friday, when it was announced that pay ore had been discovered on the face of the ledge, 250 feet south of the main shaft, at a point not reached by the underground workings of the mine. A. Lorne Beach, the manager of the property, has spent several days in sampling the surface workings and found fair average values in parts of the ledge some distance from the shaft, although the point indicated was the only one where pay ore was found.

Work on the mine at present is being concentrated on two drifts on the ledge, starting at the crosscut on the 300-foot level. The north drift has just been begun, while the south drift, which has been under way for several days, is in 27 feet on the ledge. Both drifts are in low grade ore, which, however, is improving in value in the south drift, which will be continued with all speed to cut the ore body just found, which is expected to prove a pay shoot.

Twenty-two men are working. The force will be increased to 30 at the end of the month.

A Mill for the I. X. L.

Notwithstanding the reticence of the management of the I. X. L. it has become known that recent work on that property has opened up a considerable amount of high grade milling ore and that the owners contemplate the purchase of a plant for the extraction of the gold from their ore. John Baker of Kasooma, managing director of the company, will be in Rossland in the course of a week, and it is expected that, as a result of his visit, steps will be taken to put the mine on a dividend-paying basis. Philadelphia men are the principal shareholders in the company.

A Plant for the Oro Denero.

The King Mining company, which is operating the Oro Denero property in the Boundary Creek country, has purchased a small compressor plant from the James Cooper Manufacturing company through Mr. James D. Sward of this city. The plant, it is anticipated, will be in operation inside of 12 days. The recent important finds which have been made on the Oro Denero of veins of high grade ore have caused the management to see the necessity of pushing the work so that the property may become a producer at the earliest possible moment.

MINING NOTES.

News reached here yesterday that a chute of rich ore has been found on the Porto Rico mine. The quartz from the strike shows all through it, considerable free gold. The ore is so rich that the miners who are working on the find are searched when they leave the mine. The mill at the Ymir mine is shut down owing to an accident to the machinery. In the meantime ore is being shipped to the smelter at Nelson.

Latest News From Moyie.

Great activity at Moyie is reported by Mr. J. C. Drewry, manager of the Canadian Gold Fields syndicate, who owns the Lake Shore group in that young and thriving camp. Mr. Drewry spent some weeks at the Lake Shore, getting the mine into working order, and having seen the new machinery running smoothly, returned to Rossland Saturday to meet his friends amongst the Eastern Pressmen.

When seen last night Mr. Drewry said: "We have four drills running, and are making rapid progress. Every day's work improves the appearance of the property, and I am satisfied we have a veritable bonanza in our new property. We have not resumed shipments as yet. The main has delayed the construction of our new 100-ton ore bin, and as a consequence the stopes are crowded with ore. The bin will be in readiness on Wednesday and we will ship regularly from that date. We have arranged to send a car of ore to the Trail smelter daily, and expect to increase shipments to two cars daily as soon as we settle down to actual work. We are carrying on development in all the workings, and all are in ore. In the new, or lower, tunnel we are now in 114 feet, and the face is in ore. This will be our working tunnel. We are now employing 82 men."

Interrogated regarding the St. Eugene mine, Mr. Drewry said the concentrator now being erected for that property would be running in about six weeks, while the installation of a 10-drill compressor plant is contemplated by the new management.

"You can say," said the Lake Shore man, in conclusion, "that Moyie is going to be a big camp. People are pouring in, and the town is growing rapidly."

A Valuable Map.

Captain James Morrish, consulting engineer of the New Gold Fields of British Columbia, has just finished a map showing Rossland and the Sophie mountain section. The map includes eight by eight miles and shows the city of Rossland and the mines owned by the New Gold Fields of British Columbia, as well as some of those adjoining. It also shows the trails, roads, railways, the contour of the mountains and other features. This is to be taken to London by Captain Morrish for the purpose of showing the directors the exact situation in relation to the matter of the transportation of the ores of the Velvet to the railway.

At Ogdensburg, N. Y., James Connell, a wealthy farmer of Augusta, Ont., was swindled out of \$5,000 yesterday afternoon by two sharpers. Col. Ingersoll died intestate. He owned no real property, and the value of his personal property is estimated at not more than \$10,000.

A BLACK BEAR FIND

Fourteen Feet of Shipping Ore Uncovered Accidentally.

CARRIES 10 PER CENT COPPER

There is Also About \$10 in Gold—A Quantity of Very Fine Copper Ore Brought in From the Wallingford—It Came From the Tunnel of That Property.

A find just made on the Black Bear, of the Le Roi group, while merely an incident in the development of that great mine, illustrates very forcibly a fact which should be recognized and acted upon by prospectors and mining men, namely, that the surface of a ledge should be thoroughly prospected before beginning development.

The discovery on the Le Roi was made by a gang of laborers who are grading for a lumber yard at the compressor. Within ten feet of the tunnel mouth they uncovered six inches below the surface, the capping of a ledge of oxidized quartz, heavily impregnated with copper. A hole was put in, and the first shot broke into the solid ore, which is a remarkably fine looking chalcocopyrite. Subsequent work showed the ore body to be fully 14 feet wide on the surface, while assays showed the weight of average return being 11 per cent copper and \$10 in gold to the ton.

The remarkable feature of the discovery is that the existence of an ore body at this point was never suspected, although the Black Bear has been worked for four years, the tunnel, which is over 400 feet long, having been driven on the same ledge, and only three or four feet from the pay ore which the tunnel took it away from the copper ore although it continued on the ledge and in ore of a different character.

Ore from the new find may be shot out and loaded on the cars on the spot, without sorting, being pay ore from the greatest source. It is probable that the copper will be run from the tunnel to the ore, and when the shoot is defined, it is to be expected that a considerable addition to the Le Roi's ore reserves will be made.

Good Copper Ore.

A quantity of very fine copper ore was brought down the shaft from the Wallingford mine, and is now on exhibition in The Miner window. This property is being continuously worked, and is reported to be looking most satisfactory. The drift from the tunnel is now about 60 feet from the shaft, and crosscutting to the ledge in the shaft will be commenced in a few days. The ore shown is from the shaft, and one of the best copper ores in the district, averaging over \$50 to the ton. The ore runs from 14 to 20 per cent in copper besides gold and silver values, and is continuous from the surface to the bottom of the shaft. Drifting on the ledge from the tunnel is now in progress at a depth of 25 feet, a crosscut was made and the vein found to be 40 feet in width. The ore is of a shipping grade, he says, from wall to wall. It averages about 30 per cent in copper and \$120 in gold to the ton. The group is located about three miles from the lake and 25 miles south of Vernon.

Runs High in Copper.

Mr. J. Chambers, who was formerly superintendent for the Star Consolidated, has returned from the Okanagan country, where he has been for several months past superintending operations on the properties of the Fairhaven & Okanagan Big Fourteen Mining & Milling company. Mr. Chambers reports that the results of the work done has been of a most satisfactory nature. Three shafts have been sunk on the Star, one of the group, and is in 140 feet and by Monday it is expected to be at a depth of 200 feet. The ore is of a shipping grade, he says, from wall to wall. It averages about 30 per cent in copper and \$120 in gold to the ton. The group is located about three miles from the lake and 25 miles south of Vernon.

The Big Tunnel at Ainsworth.

The big tunnel that the Highlander Mining company is driving to tap the Highlander and other mines at Great Falls, is in 140 feet and by Monday it is expected to be at a depth of 200 feet. A pipe line, 1,000 feet long has been laid from Krao creek, which gives 1,080 feet head to drive a six-foot Pelton wheel. It is expected that this will give ample water, at any season, to drive both the compressor and the concentrator. The tunnel is 833 feet in the clear, and will be double tracked. About 90 tons of ore from the Little Phil mine is being run through the concentrator daily. If this tunnel does the veins that show on the surface, Ainsworth will be one of the best camps in British Columbia.

Examined the Red Line.

Mr. D. J. Macdonald, mining expert for the Mackintosh syndicate, has returned from the vicinity of Windermere, whither he went for the purpose of examining the Red Line property, which is under bond to the Mackintosh syndicate. Mr. Macdonald said that he left Windermere there was two feet of snow on the mountain tops. He says the mining country in the vicinity of the Red Line looks as though it might make a mining country. It is, however, isolated, and remote from transportation.

Strike on the Rambler-Cariboo.

There has been considerable trading in Rambler-Cariboo, and the cause of the increased demand is the finding of the ore body in the lower tunnel which the management has just been driving for the past six months. All the ore that has hitherto been taken from the Rambler-Cariboo was extracted above the 110-foot level. There are still large reserves of ore above the 110-foot level. In order to tap the ore body 115 feet below the 110-foot level, the tunnel which is about 400 feet in length, was driven. Another object which it was desired to attain, was to get rid of the water. The mine is located in a basin, and as a consequence, there is considerable water in the workings. The pumping of this water was costly, and as soon as the 110-foot level is connected with the lower tunnel there will be no more bother from water, as it will run out through the tunnel. The ore body in the face of the lower tunnel is four feet in width, and the ore is of high grade. The ore shoot has a horizontal length of 250 feet

on the 110-foot level, and the presumption is that it will show an equal length on the 225-foot level. If this is true the management estimates that there will be found to be \$750,000 worth of ore in the mine above the 225-foot level. Of this there is said to be \$250,000 worth above the 110-foot level.

A TRIP TO THE WEST.

Mr. C. B. Murray Gives His Impressions of the Boundary Creek Section.

Mr. C. B. Murray, secretary of the stock exchange and of the mining section of the board of trade of Toronto, is in the city, having just returned from a visit to the country to the west. While he was away he visited Cascade City, Greenwood Phoenix and Camp McKinney. "Mr. Murray said he had no idea of the vastness of the mineral resources of the Boundary Creek section and Camp McKinney before his recent visit, and that there were his most sanguine expectations. These sections are certain to make one of the great mining districts of British Columbia," he said, "and some of the camps when they commence shipping, will be sure to surprise even the knowing ones. I was particularly struck with the immense reserves of ore in the Old Ironsides and the Knob Hill. Then there is the Rathmines group. I am certain that it is going to make a valuable property. There are so many claims included in its holdings, and they have such excellent surface showings that in time the Rathmines should not fail to be a producer of large quantities of ore. I was favorably impressed with Camp McKinney, and think that it will ere long have several producers of ore and dividend-payers. There is a great deal of activity in all of the Boundary cities, and they promise to become places of considerable importance. The new town of Phoenix is particularly active."

"The Columbia & Western railway is completed to within a short distance of Grand Forks. The finishing of the road is sure to make a great change in existing conditions in the Boundary country, one of which is the ease with which one can get in and out. The stage ride via Bossburg, is a trying one, particularly when the roads are in the muddy condition in which they are at present. There is the more important consideration of getting in supplies and the transportation of ore to the smelter. As soon as the facilities are afforded there are a number of mines here that will commence shipping and then will commence Boundary Creek section's productive era. Then it will fairly roll in prosperity," concluded Mr. Murray.

THREE ORE EXHIBITS.

Specimens of Rossland Ores Being Gathered for Several Exhibitions.

Every endeavor is being made to secure attractive and representative exhibits of Rossland ores, not only for the Paris exposition, but also for the New Westminster Fair and the Spokane Exposition. W. M. Dunn, who has undertaken to prepare the Rossland exhibit for Paris, is securing fine specimens from the mines of the camp, and will have a very creditable lot of ore to include in the British Columbia exhibit at the big French fair. Mr. A. L. Anderson, who is collecting specimens for the New Westminster Fair, is sparing no pains, and will have a very large consignment of ore specimens, as his field of operations includes the whole district. He requests that owners of five pounds specimens, property labelled, with names of claims, locality, and value, in order that the exhibit may have its full value as an advertisement. Specimens may be left at The Miner office.

Work on the Evening Star.

Work is making steady progress on the Evening Star. Work has been temporarily suspended on the shaft in the lower tunnel. This was caused by the inrush of water. Drifting to the east from the lower tunnel continues and the entire face is in ore. Stopping construction of the reserves in the upper tunnel. It is probable that the shipments from the Evening Star will fall off some this week owing to a change in teamsters.

Staked Ten Claims.

Messrs. William Steele and John Helm have just returned from Cariboo Creek, Trout Lake division, where they have, as a result of a summer's prospecting, staked ten claims. They were grubstaked by the Northwest Development company, one of the companies of Mr. S. P. Graves. Six days' work on the claims has been done, and the vein matter in this lead is very wide, with about two feet of a pay streak running through it on the surface. The ore of the Trout Lake section is of a very high grade. The other claims staked have an average of 10 per cent in copper. The intention is to have these properties examined by a mining engineer, and if they are as good as they appear to be, some work will be done upon them.

Diamond Dyes ARE CHEMICALLY PURE

No soap or grease to INJURE THE FINEST FABRICS.

Diamond Dyes make such lovely and beautiful colors that goods dyed with them cannot be distinguished from those dyed with the most expensive dyes. Diamond Dyes do not contain a particle of soap or fat of any kind, therefore no danger is incurred in dyeing the finest and most costly materials. When soiled goods or garments are well washed before the dyeing operation is commenced, Diamond Dyes give results that no other dyes can give—colors that never fade, wash or wear out. In a word, Diamond Dyes are true home helpers and money savers, and the only dyes that are guaranteed in the world.

CERTIFICATE OF IMPROVEMENTS.

Notice. J. and J., First Clip, Sydney, Early Morn, Mayflower Fracition, Mountain Lion, Mountain Lion Fracition and Home-stake Fracition mineral claims, situate in the Trail Creek Mining Division of West Kootenay. Where located: About two miles south of Rossland on the west slope of Lake mountain.

Take notice that I. M. A. Green, acting as agent for the English-Canadian company, limited, free miner's certificate No. B13,347, intend, sixty days from the date hereof, to apply to the mining recorder for a certificate of improvements, for the purpose of obtaining a crown grant of the above claims. And further take notice that action, under section 37, must be commenced before the issuance of such certificate of improvements. M. A. GREEN. Dated this 12th day of July, 1899.

CERTIFICATE OF IMPROVEMENTS.

Notice. Iron Hill mineral claim, situate in the Trail Creek mining division of West Kootenay district. Where located: Adjoining the Southern Cross and Wolverine No. 2 on the west.

Take notice that I. N. F. Townsend, acting as agent for Thomas Smri No. B. 18036, Miles O'Neil, No. 19297 A., Lake D. Wolford, No. 4524 A., Alexander Rogers, No. 6773 B., Mary Hennessey, No. B. 11893, and David B. Bogie, No. 33588 A., intend, 60 days from the date hereof, to apply to the mining recorder for a certificate of improvements, for the purpose of obtaining a crown grant of the above claim. And further take notice that action, under section 37, must be commenced before the issuance of such certificate of improvements. N. F. TOWNSEND. Dated this 24th day of July, 1899. 7-27-10c.

CERTIFICATE OF IMPROVEMENTS.

Notice. Saratoga, Golden Plate, Waters Meet mineral claims, situate in Trail Creek mining division of West Kootenay district. Where located: On Chapman creek, six miles from the Columbia river. Take notice that I. F. A. Wilkin, acting as agent for the Golden Plate Consolidated Mining Company, Limited, free miner's certificate No. 13,147A, intend, 60 days from the date hereof, to apply to the mining recorder for a certificate of improvements, for the purpose of obtaining a crown grant of the above claim. And further take notice that action, under section 37, must be commenced before the issuance of such certificate of improvements. F. A. WILKIN. Dated this 28th day of June, 1899. 6-29-10c.

Certificate of Improvements.

Notice. Iron Clad, Spokane, Nellie Gray, Delta and Pittsburg mineral claims, situate in the Trail Creek Mining Division of West Kootenay district. Where located: About three miles up Sullivan creek.

Take notice that I. W. E. Devereux, acting as agent for T. A. Cameron, free miner's certificate No. 37378, intend, 60 days from the date hereof, to apply to the mining recorder for a certificate of improvements, for the purpose of obtaining a crown grant of the above claim. And further take notice that action, under section 37, must be commenced before the issuance of such certificate of improvements. W. M. E. DEVEREUX. P. L. S. Dated this 3rd day of July, 1899.

CERTIFICATE OF IMPROVEMENTS.

Notice. Mountain Bell mineral claim, situate in the Trail Creek Mining Division of West Kootenay district. Where located: On Norway mountain.

Take notice that I. F. A. Wilkin, acting as agent for K. T. Englekjen free miner's certificate No. B 13518; F. E. Empey, free miner's certificate No. 19587A; Martin Hagen, free miner's certificate No. B13509, and Hans Peterson, free miner's certificate No. B6741, intend, sixty days from the date hereof, to apply to the mining recorder for a certificate of improvements, for the purpose of obtaining a crown grant of the above claim. And further take notice that action, under section 37, must be commenced before the issuance of such certificate of improvements. F. A. WILKIN. Dated this 28th day of August, 1899.

CERTIFICATE OF IMPROVEMENTS.

Notice. Edna, Jennie, S. C., Gopher Fracition, S. C. Fracition, Monterey, Bobolink and A. B. C. mineral claims, situate in the Trail Creek Mining Division of West Kootenay district. Where located: About one-half mile south of Rossland, in the valley between Deer Park and Lake mountains.

Take notice that I. M. A. Green, acting as agent for the English-Canadian company, limited, free miner's certificate No. B13,347, intend, sixty days from the date hereof, to apply to the mining recorder for a certificate of improvements, for the purpose of obtaining a crown grant of the above claims. And further take notice that action, under section 37, must be commenced before the issuance of such certificate of improvements. M. A. GREEN. Dated this 12th day of July, 1899.

CERTIFICATE OF IMPROVEMENTS.

Notice. Philadelphia, Roman, Eagle, Seal, Small, Carpenter, Vancouver and London Belle mineral claims, situate in the Trail Creek Mining Division of West Kootenay district. Where located: About two miles southeast of Rossland, on the west slope of Lake mountain.

Take notice that I. M. A. Green, acting as agent for the English-Canadian company, limited, free miner's certificate No. B13,347, intend, sixty days from the date hereof, to apply to the mining recorder for a certificate of improvements, for the purpose of obtaining a crown grant of the above claims. And further take notice that action, under section 37, must be commenced before the issuance of such certificate of improvements. M. A. GREEN. Dated this 12th day of July, 1899.

CERTIFICATE OF IMPROVEMENTS.

Notice. Elk No. 1, Ethel No. 1, Iron King No. 4, Tenderfoot, Ada L., Blue Bell No. 1, Elk No. 1 Fracition and Ethel No. 1 Fracition, mineral claims, situate in the Trail Creek Mining Division of West Kootenay district. Where located: At the head of Murphy creek. Take notice that I. R. E. Young, (as agent for The Pavo Consolidated Mines, Limited Liability, free miner's certificate No. B13,446, intend, sixty days from the date hereof, to apply to the mining recorder for a certificate of improvements, for the purpose of obtaining a crown grant of the above claim. And further take notice that action, under section 37, must be commenced before the issuance of such certificate of improvements. R. E. YOUNG. Dated this Twenty-fourth day of August, A. D. 1899.

CERTIFICATE OF IMPROVEMENTS.

Notice. Young & Burnett, Rossland, B. C., (as agent for the Pavo Consolidated Mines, Limited Liability, free miner's certificate No. B13,446, intend, sixty days from the date hereof, to apply to the mining recorder for a certificate of improvements, for the purpose of obtaining a crown grant of the above claim. And further take notice that action, under section 37, must be commenced before the issuance of such certificate of improvements. R. E. YOUNG. Dated this 12th day of July, 1899.
