THE ORIGIN OF SPECTACLES.

An eminent authority has recently contradicted some widely accepted opinions on the subject of spectacles. For instance, he found, as the result of an examination of historical data, that to the Egyptians, the Greeks and the Romans glasses were unknown. This is in contravention of the common statement that Nero used to correct his near-sightedness. Spectacles, we are now told, were invented by two Italians. Armanti and Spina, at the end of the thirteenth century. At first only convex lenses were used, but ! after about two centuries concave ones were employed. Thomas Young discovered the use of cylindrical lenses in 1801, and the astronomer Airy applied them for the correction of astigmatism in 1827. Bifocal spectacles ASBESTOS IS were invented and first used by Benjamin Franklin in 1785.—Harper's Weekly.
