

DOCTORS DID NOT HELP HER

But Lydia E. Pinkham's Vegetable Compound Restored Mrs. Bradley's Health—Her Own Statement.

Winnipeg, Canada.—"Eleven years ago I went to the Victoria Hospital, Montreal, suffering with a growth. The doctors said it was a tumor and could not be removed as it would cause instant death. They found that my organs were affected, and said I could not live more than six months in the condition I was in."

"After I came home I saw your advertisement in the paper, and commenced taking Lydia E. Pinkham's Vegetable Compound. I took it constantly for two years, and still take it at times, and both my husband and myself claim that it was the means of saving my life. I highly recommend it to suffering women."

"—Mrs. ORILLA BRADLEY, 284 Johnson Ave., Winnipeg, Manitoba, Can."

Why will women take chances or drag out a sickly, half-hearted existence, missing three-fourths of the joy of living, when they can find health in Lydia E. Pinkham's Vegetable Compound?

For thirty years it has been the standard remedy for female ills, and has restored the health of thousands of women who have been troubled with such ailments as displacements, inflammation, ulceration, tumors, irregularities, etc.

If you want special advice write to Lydia E. Pinkham Medicine Co. (confidential) Lynn, Mass. Your letter will be opened, read and answered by a woman, and held in strict confidence.

HARRIS & CO. PROPRIETORS

WATFORD, OCTOBER 24, 1913.

69c. or \$1.00

A well known local store was advertising winter underwear at a cut rate, to be exact, 69 cents was asked for garments that had been bought to sell at \$1.00.

A Mercury man who was in the store asked the proprietor why it was that the price of underwear had been reduced just as the season for a ready sale of that class of goods was coming on. The dealer replied that the explanation was easy enough. "I bought this stuff in England. It is good, reliable underwear, but there is no demand for it, so we must get rid of it by cutting the price. The Canadian people don't know about it. We can't sell against the brands that are so extensively advertised in the papers and magazines. There is a demand for the advertised underwear, and it's easy to sell it, although there is little or no difference in the quality."

Here's a concrete case of the value of wide and consistent advertising. The advertised article can be sold for \$1, while the unknown stuff goes on the bargain table at 69c. Skeptics about advertising, and its resultant benefits, will find a hard time explaining this away.—Guelph Mercury.

The indications of worms are restlessness, grinding of the teeth, picking of the nose, extreme peevishness, often convulsions. Under these conditions the best remedy that can be got is Miller's Worm Powders. They will attack the worms as soon as administered and will grind them to atoms that pass away in the evacuations. The little sufferer will be immediately eased and a return of the attack will not be likely.

The Egyptian Egg Oven

A few days ago the cabled news was published all over this continent that from the ruins of Ancient Egypt there had been dug up an incubator for hatching eggs that had lain buried in the sand for many centuries. Surprise was expressed that this essentially modern industry of hatching eggs by artificial means should now be shown to have been practised on a large scale in such far-off times. As a matter of fact, it is only the method, and not the art, which is new. While the western races have laboriously evolved their own machines for this purpose, the art of artificial hatching had been practised for upwards of 5,000 years in Egypt, in China and other Asiatic countries. In Egypt the industry is an enormous one. It is estimated that at the present time in Lower Egypt there are several hundreds of these hatching establishments, and that in many cases they have a capacity for 40,000 eggs at one time. A few years ago the American Consul-General in Egypt estimated that upwards of 90,000,000 chickens were hatched annually in the egg ovens of that country.

The incubators we use are mere toys compared to those of the Egyptians. They use "ovens" for the purpose. A recent visitor to one of these ovens says that it consisted of four hatching chambers, each of these chambers, about four by four yards, being capable of holding up to 6,000 eggs at a time, and accommodating each season about 180,000 eggs. Even this was a small oven, the majority consisting of from ten to twenty hatching chambers, each four by four yards.

The temperature is regulated by manipulating the fire (often the fire is allowed to go out for a few hours) twice each day and by regulating the ventilation. The fuel usually used is wheat or bean straw, chopped and mixed with a certain amount of animal manure. The upper chamber is consequently full of choking smoke, and there is always a lot of smoke in the hatching chamber. The mud-brick walls are made very thick, and doubtless retain the heat well and prevent sudden changes of temperature. Every time the eggs are turned care is taken to remove those which have been immediately under the fires, and place them in the centre of the chamber; this is said to be a most important point. The success attending the industry, and the colossal manner in which it is conducted, suggests that the poultry farmers of Canada, even though they may learn all that Macdonald College or the Experimental Farm at Ottawa can teach them about poultry, are but on the threshold of the subject.

\$100 Reward, \$100.

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials.

John—"Go to sleep; it's only history repeating itself."

KEEP HOUSE COOL

Ways of Preventing the Summer Home From Becoming Hot.

LET IN THE GOOD NIGHT AIR.

It is Particularly Important That Attic and Cellar Should Have Proper and Sufficient Ventilation—Neglect of This Causes Trouble.

Keeping the house cool in summer is not always an easy problem to solve. People who have large houses and money enough to equip them with electric fans and other appliances can, of course, keep very comfortable, but it is more difficult to manage it in small houses.

Windows must be shaded with blinds, shutters or awnings and be well screened. All the heavy hangings should be removed and where possible the carpets should be taken up and cool colors, such as white, gray, light greens and blues, should take the place of the warmer colors. Then white muslin curtains soften the light, though many people object to even that much drapery.

The coolest hours of summer are the night hours. Therefore the night air should be allowed to circulate freely through every part of the house. The best circulation is obtained by having windows open at the top and bottom instead of entirely at the bottom. This lets out the hot air and lets in the cool. When this method is followed put the screen in the lower sash of one window of each room and in the upper sash of another.

As it is important that sunlight, too, should enter the house at some time of the day, open all the blinds and windows in the early morning for a little while. Then darken the house for the rest of the day.

It is especially important that the attic and cellar should have proper ventilation. In the former a skylight or window should be kept open night and day; except, of course, when it rains. The cellar windows should be open only at night when it is comparatively cool. Open them at sundown and close them at 9 o'clock in the morning. Neglect of this method of airing the cellar causes a great deal of trouble during the hot weather. If the windows are not closed during the heat of the day the warm, moisture laden air enters the cellar and condenses on walls, pipes, metals, etc. The colder the surface the greater will be the amount of moisture that will condense upon it, and a few days of neglect will make the cellar so damp that it will not be a suitable place for keeping food.

Fall Suit of Peach Cloth. Stunning isn't it this autumn suit of peach cloth? Why, the cognomen fashion sayeth not, but the mere layman infers the derivation to have come
