To the Royal Electric Company
Montreal Quebec

Dear sirs

A number of people interested in electric lighting have told me personally and also written me, that they are informed that the Electric lighting plant installed by you for me is not giving satisfaction and it has not been accepted by me. The parties making these statements either know ^{they} to be false or have not inquired from me or the towns-people within the last five months, or they would know that the lights and plant are working splendidly and to my entire satisfaction. The plant has been accepted and settled for. Now for the interest of all concerned: I wish to confirm the above statement and further to say that the S.K.C. by name (since I took the obstructions out of my water wheels which had collected in the wheels owing to not being properly screened before starting) requires less power than I expected it to do gives a fine steady light and the regulation with a full load on it is such that I do not have to touch the wheels more than four or five times during a night's run. I regulate entirely by the water wheels having no governors. The run through the two late terrific lightning storms and although both telegraph & telephone lines were wrecked round us and the lightning was constantly flashing around the sub-board we never had a flicker in our lights while
