Will be pleased to correspond with Canadian Manufacturers and Exporters desirous of opening up direct relations with Australasia.

pure, and in a more serviceable form for dyeing; also to gaining new colors, which not only approach in brilliancy and effectiveness the natural kinds, but even surpass them. Since the discovery was made in 1868 that the important dye-stuff, madder-alizarine, could be produced in an easy and cheaper manner from the carburetted hydrogen of coal-tar, the use of dye-stuffs obtained by coal-tar distilling has gradually grown to such a degree that in Germany about five times as many artificial colors are made as in all other countries combined. According to the last census on June 14, 1895, there existed twenty-five factories for the manufacture of aniline and aniline colors, and forty-eight factories (with seven branches) for the production of other coal tar products (i.e., not only for colors, but also for other commodities, such as picric acid, etc.). The aniline works employ 7,266 hands, the latter factories 4,194; in all, 11,460 men.—Kuhlows's.

German manufacturers, says an American Consul, are suffering from the effects of over-production. Their foreign markets have not increased proportionately with the increase of home production. During the past year, German exports to China and South Africa, have practically ceased. The Empire's exports to the United States, England, the Orient, South America, and the Balkan States, have been on the increase; but these markets have fallen far short of consuming all that German manufacturers have produced. Then, the most powerful factor with which German industries have had to contend, has been the development of independent industries in those countries where Germany has always had her best markets. Especially has this been the case in the United States with all textile products. British merchants and manufacturers, may therefore expect to see a decline in prices in German goods, and to find them consigned to England on the dumping ground principle.

CUBA.—The Engineering News says that about \$30,000 will be spent next year in harbor works at Cardenas. Other harbor works will also be carried out next year. Secretary Villalon, of the Board of Public Works, Havana, is to be in charge of this new work. It is proposed to build a macadam road from Sagun to Santa Clara.

DUTCH EAST INDIES.—The Engineering and Mining Journal states that the production of tin in the Biliton District in Java for the year ending June 30, 1900, was 10,767,261 lbs., against 12,224,296 lbs. in 1899, and 11,680,592 lbs. in 1898. The largest output ever reported from the district was 14,130,585 lbs. in 1891-92, since that time the production has been gradually decreasing.

GALVANIZING

We are prepared to attend to all orders Promptly and Economically.

WINDMILLS, PUMPS, TANKS, Etc.

ONTARIO WIND ENGINE and PUMP CO.

LIMITED.
