Medical Diseases of Infancy and Childhood. By Dawson Williams, M.D., London, Fellow of the Royal College of Physicians, London, and of University College, London; Physician to the East London Hospital for Children; second edition revised with additions by Frank Spooner Churchill, M.D., Instructor in Diseases of Children, Rush Medical College, in affiliation with the University of Chicago; Professor of Pediatrics, Chicago; Polyclinic. Illustrated with 72 engravings and two colored plates. Lea Bros. & Co., Philadelphia and New York, 1900. Cloth, \$3.50 nett.

There is no class of patients who appeal more strongly to the physician and surgeon than those who come under the designation of infants and children. This is due to two causes, viz.: 1. They form a very large percentage of those they are called upon to treat, and are of immense importance, therefore, from a pecuniary sense. 2. The very helplessness of infantile life, depending almost entirely on objective symptoms for elucidation of its diseases, appeals with much force to the better nature of the profession. Yet, strange to say, up to twenty years or so ago in this country no special attention was given to diseases of infancy. The consequence was that young graduates felt themselves at sea when confronted with an infant, unable to tell its tale of woe except by signs which speak to experienced eyes well-nigh as well as words. How different it is now? With special professors in every Medical College, and an extensive literature on the subject, these little sufferers receive vastly better treatment and care. Among the numerous works which have of late years appeared devoted to diseases of infants, that of Dr. Williams, of London, has occupied a prominent place. The present American edition, edited by Dr. Churchill, is decidedly of more value than the original London edition, inasmuch as it brings the work up to date, and represents also in addition, enclosed within brackets, the views of the leading physicians of the United States. There is a very valuable chapter on infant feeding, in which the views on this subject held on this continent are very clearly and concisely stated.

The work is one that should be in the hands of the general practitioner, and we commend it to them as a most valuable book.
