

Official and private reports
 from there show whitefish
 to have been more plentiful
 than for years past; that
 it is true they were not
 so plentiful at Lake Abertan
 but this is accounted for by
 the very shallow water in
 the Lake Saskatchewan River
 which prevents fish from
 ascending that stream;
 that Mr. Johnson who
 was present during the
 fall fishing at the Lake
 Saskatchewan reports that
 gunther and company and
 other white fishermen there
 operated from two to eight
 miles from the mouth of the
 river
