**A REMARKABLE
COMPARISON**

To think that 1,700 pounds of coal in the Down Draft Furnace produces as much heat as 2,000 pounds in any ordinary furnace.

WHY?

Because the DOWN DRAFT furnace is built on proper lines and not a single heat-producing feature is overlooked.

The Down Draft Principle burns all the gas and soot from the fuel, and as the gas is the greatest heat-producing element, the benefit of this is derived. The air drawn down the Down Draft Pipe forces even burning over the whole surface of the fuel and does away with dead coal next to the fire-pots. The fire-pots are heavily flanged, and thereby additional radiating surface is acquired. Every particle of heat is extracted from the fuel. There are less clinkers and ashes. Additional radiating surface is furnished by the cast-iron heating dome, and as all the heat is discharged into warm-air spaces of proper proportion, the heat rises properly to the hot-air pipes, which are so installed that the warm air is carried where it is required and not wasted.

It burns either hard coal, soft coal or wood with equal efficiency. Send for copy of catalogue and an estimate on your heating.

Unshrinkable

The only possible way in which underwear can be made unshrinkable is to take the "shrink" out of the wool, before garments are woven.

This is the way Stanfield's Underwear is made. That is why

Stanfield's Underwear

is absolutely unshrinkable.

**A Strong, Stay-Tight Connection Where
Other Mowers are Weak**

Seventy years' experience, plus a disposition to use the very best materials when it might seem more profitable to cheapen things, is why Frost & Wood Implements excel from the "Quality" standpoint.

Take, for instance, the connection between the Cutter Bar and Main Frame of a Mower. Others use Small Pins, that wear quickly, thereby allowing connection to work loose, and eventually "bang" the machine into a blacksmith shop. We use "large" Bearings for our "stay-tight" connection (see illustration). They

**FROST & WOOD
No. 8 MOWER**

fit accurately and there is no opportunity for wear, because Cutter Bar has no chance to work loose from Main Frame. No time lost on the field—no bills to foot.

Another example of Frost & Wood "Quality" is the Pitman Connection of Forged Steel and "the Ball and Socket Joint"—strongest, firmest connection on the market.

Roller Bearings, with heavy boxes to maintain them in perfect position, make the No. 8 run easier than others. Every connection is neat and accurate. The "Internal Gear" cuts out the necessity of a "flying start" knives commence cutting with first forward step of horses.

The No. 8 Mower and its companion, the Tiger Rake, are on the top most rung of the "Quality" ladder.
