

ROSSLAND WEEKLY MINER.

Two Dollars a Year.

ROSSLAND, B. C., THURSDAY, JUNE 28, 1900.

Fifth Year, Number 35

FROM OTHER CAMPS

Good Reports Received From the Similkameen.

A STIR IN LARDEAU DISTRICT

Notes of Interest on Properties all Over the Kootenays—Prospecting Near Windermere and its Successes—Capital Interested for the Similkameen.

From the Lardeau this week comes a good deal of interesting mining information which goes far to show the value of the properties in that region. Mr. H. Jackson, one of the directors of the Wide West group, situated on Pool creek, a tributary of the well known Fish creek, has a very high opinion of his property, and speaks with no uncertain tone regarding its future. There is no doubt but that this section of the country is one of the most promising in the Kootenays. From the Boundary is reported a novel departure in the shipments of the City of Paris. It is shipping galena to the lead stack at Trail and at the same time sending copper-gold ore to the Granby smelter. This is a wonderful illustration of the variety of ores to be found in the metalliferous mines of the Kootenays. From the Similkameen comes a report of steady work, which has had its reward in the floating of some of its properties in England, where the richness of the district has attracted some little attention.

THE LARDEAU.

The Wide West Group on Fish Creek. Other Properties.

Chas. McKay, M. Beaton and W. Stratton have been doing assessments on Lexington Basin.

Four men have been working for the last three weeks on a contract on the Potlatch property, situated just above the Mohawk.

The Banner group on Lexington creek is another property in which the same people are interested, and which Mr. Woods intends to open up this season.

Assessment work on the Peacock Copper, an extension on the Copper King, owned by William Baty, has just been finished by Messrs. Carter, Thompson and Morgan with satisfactory results.

Mr. Woods, the mining engineer for the various properties which Jackson of Rossland has bonded in the same way, look up 14 men last week to work on the Black Bear and Wide West properties. T. Downing went up with the party.

J. Brady and Steve Slinger left on Monday to do assessment work on the Montana group, which is situated on the old Silver Cup trail, about a mile above Eight-Mile. The group consists of three claims, the Joe Martin, J. B. and Montana.

A. St. G. Hamersley of Vancouver was in looking over the Silver Queen last week previous to the company making the second payment. Mr. Hamersley will return in about three weeks, when further particulars will be made available.

A fine lead about four feet wide has been exposed by a land slide this spring on the claim adjoining the Back Bear on the east, situated at the headwaters of Pass Creek. H. Carter and D. Morgan will commence work upon it as soon as the snow goes off at that point.

Messrs. Morgan and Irwin have decided not to try getting in supplies to the Mabel for a few weeks yet on account of the snow, but the first week in July will see them hard at work. The owners intend to do a lot of work and make a test shipment this summer.

J. W. Westfall came down from his various properties up the north fork last week. Things are looking A 1 on the Old Gold, and the men are all hard at work on the other properties, but nothing of note has transpired during the past week.

Hugh McCurdy, Chas. Dillon and Geo. Bothwell came in from Trail, B. C., last week to commence work on the Daisy and Kicker, properties they located last season above Haskins creek, at the foot of Trout lake, on what they claim to be the same lead as the American, which is now pending sale, is staked upon. If developments are satisfactory they may continue work for some time.

James Comerford came down from the north fork last week and reports things brisk up that way. Mr. Comerford was up at the Richmond and Hope, owned by H. Carter and L. Thompson. They have eight feet of ledge matter, carrying copper and galena, assays of which go 32 per cent copper, 55 ounces silver and 82 in gold, also lead, to the ton.

D. Morgan and C. A. Irwin have left for the Early Bird, located between the Golden Gate and I. X. L. and also adjoining the Alpine. They now have a nine-foot shaft sunk upon the lead, but intend to open out and prospect with a view to deciding the best means of future development. This property is in good company, but like many such it requires development to prove its worth. The indications so far are extremely gratifying to the owners.

Arthur Evans, L. Wisner and Harry Nellis have left with supplies to commence work on the Revenge and Chamberlain, two promising properties up Fish river, adjacent to Cambourne, the new townsite. They intend to cut out a trail, build a cabin and make preparations to continue work indefinitely. Work will be pushed on the new showing discovered this spring. A trial shipment will be made, and the owners are confident that it will net them at least \$100 to the ton.

D. Morgan, L. Thompson and H. Carter have returned from up the north fork, where they have been doing assessment work on the Copper King, owned by H. C. Dier of Revelstoke. A 10-foot open cut on one of the leads and a seven-foot tun-

nel higher up on the same lead is the result of their work. The Copper King is located on the west slope of the north fork, five and one-half miles from Ferguson. It is accessible the year round, but sufficient development has not yet been done to demonstrate its value.

The eight men working on the trail from Ten-Mile to the Triune group came down on Saturday night, having completed the trail after two weeks' hard work. The Messrs. Lade and Gunn brothers left this week with pack horses and supplies to commence work on the Triune. They will take out ore all summer to ship this winter. The government, through our new representative, Thos. Taylor, will be asked to try and secure \$300 to put the trail into good shape.

W. E. Smith of Seattle arrived in the Lardeau this week. Mr. Smith, R. Crilly, foreman at the Nettie L., and two Hyde brothers, also of Seattle, own the Smith group on Mohawk creek, about a mile below and north of the Beatrice. The group consists of three claims, the Franklina, Frisco and Back Hawk. Last season Mr. Smith drove a crosscut tunnel of 60 feet on the Back Hawk, the centre claim, but did not reach the lead. It is his purpose doing this summer, with the assistance of a miner sent by Mr. Crilly in his stead. They expect to tap the lead with ten feet more work. In order to gain more depth they will begin sinking at this point on the lead and then drift. The surface showings are excellent. Four assays averaged 86 in gold, 111 copper and \$84 in silver and lead values. The owners have the courage of their convictions, and will stay by this property until it becomes a shipper's gold.

Walter Russell, Dan Cameron, Char. Morrison, Alfred McPherson and four others left last week to commence work on the Wide West group, situated on the headwaters of Pool creek, a tributary of Fish river, about six miles from Cambourne, owned by the Wide West Gold Mining company of Lardeau. This group consists of three claims, the Wide West, Lake View and Ontario, comprising about 156 acres of mineral land. W. H. Jackson of Rossland, one of the directors, has been in the lead, and the directors say: "There are five large areas of solid slate and range of mountains of solid slate and lime formation, which ledges are plainly visible for miles distant, showing an immense schist and iron cropping, with veins of quartz, calcite and iron, stratified in all directions, from six to 15 feet wide, the quartz being soft and sugary, impregnated with iron and galena rock well mineralized. On ledge No. 1 there is from one to three feet of shipping ore and 12 feet of ledge matter. Ledge No. 2 is about 15 feet wide, with a large body of ore in sight. Ledge No. 3 is about 8 feet wide, with seams of galena ore in solid iron pyrites. Ledge No. 4 is 15 feet wide, with seams of galena ore. These solid iron pyrites and galena ore. These leads are known as the Great Horn, Back-burn, Lost Horse and the Jenny Lind. These are the only properties in the Lardeau country that I know of which have five of the greatest leads of the country running through them. The development work done on the claims consists of open cuts on the surface opening up the leads. Considerable prospecting has been done, and wherever there has been a shot put in the ore shows up in large quantities. The assays are as follows: No. 1, all values, \$61.20; No. 2, \$34; No. 3, \$28.90, and several others running between \$25 and \$50, showing that the average would be about \$45 to the ton.

EAST KOOTENAY.

Notes of Many Properties—What the Prospectors Are Doing.

W. H. Craik has commenced work on the Silver Belt.

Wm. Haupt started work on the Silver Thread last week.

R. S. Gallup is putting four more men to work on his Jumbo creek property. The Taylor and Haupt Syndicate will start work in a few days on the Tecumseh group.

D. Lyons has gone up McDonald creek to do some work on the Amazon and Casboun claims.

Messrs. Brown, McLean and Connors have left for Number Two creek on a prospecting trip.

J. Thompson is up the north fork of Toby creek doing assessment work on the Star and Daisy.

Joseph Lessard has left for the north fork of Number Two creek to do assessment work on his claims in the Isaac Basin.

J. Fraser and B. Washburn will go up to the Marion group this week, on which they will do considerable work.

Prospectors coming in from Toby creek report that there is quite a rush of men coming over the divide from West Kootenay.

R. A. Power has left on a trip up Toby creek, where he is interested in several claims adjoining the Mineral King.

W. W. Fallows of Sandon arrived in Windermere the other day, and is now up Toby creek doing some work on his claims.

Ben Abel and partners will leave in a few days to do the work on the Dutchy group and other claims up Copper creek, a tributary of Dutch creek.

Four miners are reported to be working some claims up Toby creek for Rossland people. They will continue work throughout the summer.

R. Green of Kaslo intends coming into this district shortly to look after the interests of French and English capitalists, by whom he is employed. He spent a short time here last summer.

Henry Hess reports that the lead has been struck on the Silver Tip and that work is now confined to drifting on the lead. The claim is showing up remarkably well.

The Fleutot Syndicate intend doing a considerable amount of work this summer on the Rambler and Morris and two other claims purchased from Hess and Miller last summer.

Messrs. Hess and Miller are following the lead with good success on the Montana, situated just above the Silver Tip

on Toby creek. They report a good showing of copper and gold ore.

W. Tynnton and J. Hendrickson are doing their assessment work on the Sanson, on the north fork of Toby creek. Assays from this property have run as high as \$155 in all values, and it is expected that the present work will considerably enhance the value of the property.

D. F. Strobeck, an Ainsworth mining man, will be here very soon to examine some claims that were located by his prospectors last year. He says that he has assays of ore from these claims of a very high value. He will bring with him an expert mining engineer to examine the claims and make a general tour of the different creeks.

The owners of the Copper King, situated on the south side of Toby creek, oppose the Mineral King, intend shortly doing their assessment work. The work done last year shows the lead to be 12 feet wide and traceable for 200 feet, with eight inches of clean grey copper and galena ore. Returns from assays give in all values \$108. The formation is slate. Messrs. Hess and Miller, the lucky owners, believe they have a very valuable property in the Copper King.

THE BOUNDARY.

Notes on Several Properties—The King Solomon Mine.

The tunnel on the Highland Chief is in 30 feet, and the ledge is now being crosscut.

J. P. Harlan of Deadwood has been looking over the West Fork properties for the past week.

F. Hennessy is crosscutting the lead on the Knob Hill at a depth of 40 feet. There is a large body of copper-gold ore on this claim.

Chas. Collins and F. Miller have been working on the Hard Cash, a claim adjoining the Black Diamond, and have struck a lead two feet in width which averages \$80 per ton.

Robt. Wood of Greenwood has moved the plant used at his mine near Penticton to the Sallie claim on Wallace mountain, about a mile from Beaverton. A tunnel has been run 120 feet on the claim. The ledge is about 15 inches wide and runs very high in silver.

George Wells has just completed assessment work on the Highland Liss and Duncan. The Highland Liss lies between the Highland Chief and Belt claims. The lead is about 15 inches of very high grade ore.

Three shifts are working on the new shaft on the Carmi, which is down 80 feet, and all in ore. The ledge is between four and five feet in width. In the last ten feet the average assays have been a little under \$50 to the ton in all values. A store and hotel have been opened at Carmi.

Frank Chandler and Captain Shields and hotel have been opened at Carmi. Just came down from Beaverton last week and report considerable activity in that district. A large number of prospectors are going into this country, and development work is being pushed on many of the claims around Beaverton. A representative of Jay P. Graves has been in the district for the past two weeks looking over the properties there.

About 200 feet of work has been done on the King Solomon, consisting of shafts, tunnels and open cuts. There are three leads on the property. On the lower lead a shaft has been sunk 30 feet, and a drift run on the ore body for about 10 feet. A tunnel has also been run 30 feet on the same lead. The ore body is about six feet in width. On the upper lead there is an ore body five feet in width on which a tunnel has been run 75 feet, and two shafts each about 16 feet. On the center lead a shaft has been sunk to a depth of 15 feet.

The R. Bell claim in Summit camp, owned by Bamberger Bros., is being developed for the purpose of getting the ore to the Granby smelter. Jay P. Graves is financing the property to this extent only, and has sent a small upright boiler, hoist and pump to the claim. The work is in charge of Jack Hanley.

Development work on the J. and R. claim adjoining the Golden Crown on the west, in Wellington camp, is being pushed under the direction of John Rogers. The property is owned by Messrs. Jones and Rogers of this city, and Ostraki of Greenwood, and has a very good surface showing.

A new departure has been made by the Boundary mine, and a car of galena has been sent out to be treated in the lead stack at Trail. This is one of the first, if not the very first, shipments of such ore sent out of the district. The City of Paris ore in Central camp is the property which is making the shipment, and it was hauled down to Grand Forks by wagon and there loaded into the cars for the smelter. During the early development of the property a considerable showing of mineral was made, and subsequent development has been sent out to be treated in the lead stack at Trail. This is one of the first, if not the very first, shipments of such ore sent out of the district. The City of Paris ore in Central camp is the property which is making the shipment, and it was hauled down to Grand Forks by wagon and there loaded into the cars for the smelter.
