The Household.

In olden times the school was only though of as a place in which to gain knowledge, and any means were considered justifiable in getting rid of obstacles to this aim. Now, the wills and capabilities of pupils were—as they still are—the most frequent obstacles to

the reception of knowledge.

The method which the schoolmaster ought most effective and least troublesome to himself was to ride rough shod over these wills and capabilities, by flogging or torturing the pupils till their wills were forced into submission, or till their capabilities were stretched, in some fashion, to receive knowedge for which they might be ill-adapted. But with our modern recognition that the school is not only a place where knowledge pedestal of state with cane in hand, he cried is to be gained but also a place where the character is to be moulded, the question of unishment in relation to character-building as received much attention, and the result | long as this cane will last! You are to say has come to be a far more important feature | Remember that if you value your hides!" of school life than punishment, pure and

On the principle that prevention is better than cure certain definite regulations are the creed. He had got as far as "suffered to the creed. He had got as far as "suffered to the creed." laid down in each school which, if adhered to, do away with the necessity of constant words, when the doctor's prohibition unlucknishment. However, if these regulations are not kept, they can be enforced by penalies, which, instead of being the once universal floggings for every offence, are carefully proportioned to the wrong done, and are times termed the "moral suasion" methods. Among these methods flogging ends now to be used only as last resource. Instead of reward and punishment resting, more or less, upon the good or bad temper of a master, they now come as the sure conequences of the pupils' own behavior. Púpils thus learn to look upon themselves as

responsible beings.

To Interest Children in Work. Constant change in occupation is the law f the growing child, because the law of his growth demands it. The work of the home and its environs is admirably adapted to this

necessary, constant change.

Let the children work with you. Share Sam said naught, but the doctor, who saw what a dunce he had to deal with, cried: with them, and they with you, in all the occupations of the home. Talk, explain, sing while at work, and there will be no lack of brains? interest. It is only when the little ones are left to work alone or with other chidren ou tasks which they do not comprehend that

they become listless.

The healthy, happy child is naturally an enthusiast în anything which he undertakes. He likes work. His play is workbusiness-and he would prefer to spend his energies in some way that will "help," if he only knows how to do it. Of course he must not be kept at one thing until the muscles and faculties employed become wearied.

After he has kept his arms, hands, legs and feet moving in a certain way for a few minutes he must change. He will change so as to bring other parts into play unless he is arbitrarily prevented, and when that happens he loses interest and becomes a dull, sullen uninteresting "bother of a boy," judged the ordinary onlooker, when, in fact, only tired out and suffering. Make work light and pleasant, and do not let the children be counted out of the homemaking
