THE USE AND MANAGEMENT OF INCUBATORS

BEST MACHINES ARE CHEAPEST. -DIRECTIONS SHOULD BE

Department of Agriculture,

Ottawa, Feb. 2, 1905. bator question is an important one to beginner in the poultry business should size the same care and judgment house in which he keeps the fruit uningly little concerned about it. pended upon. With a first class ma- within convenient distance of his per degree of heat and bring the eggs from the kiln.

cubator must not only hatch a large in the season. There it is put into for wood-alcohol acts as a special percentage of chicks, but those hatched must be large, strong and lively.

cold storage at a cost of 50 cents per poison to the eye, and may destroy the sight completely if used constantly The test of incubation is not alone in thinks it pays to have his finest ap- for a long period. health, vigor and hardiness of the chicks and their ability to live and pull out at an instant's notice, and if thrive. Faulty incubators are respon- the market should be short of supplies in toilet preparations, is to see that sible for the death of many small for a few days, and prices rule exceed the best only are used. chicks. Being poorly hatched, that is, hatched with ten or twenty or thirty per cent. less vitality than they should have, they struggle against heavy odds and die off in large numbers in the brooders. If, by buying a low body seemed to want them; neither did tor, a man gets a twenty per cent. lower batch, or gets twenty per cent. has utilized his spare time in assort-

hatch, he has bought the probability of failure in buying that machine. A large hatch of strong chicks can not be expected unless the eggs used are from a pen of thrifty, vigorous get as much for his No. 2 fruit in the formular that do a gentlement of the breeding stock is lacking mid-winter months as he is able to serve the formular that do a gentlement in the least serve that the breeding stock is lacking mid-winter months as he is able to serve the serve that the breeding stock is lacking and the breeding stock is l in vitality the chicks are sure to be weak. The fresher the eggs are, the greater is the vitality of the germ and the more chicks they will hatch It is not advisable to use for hatching ing the incubation period. The use of a simple egg tester will enable a man to know what percentage of the eggs are fertile, and thus prevent him blaming the machine when it is not at

The advantages of a really good in cubator are not all summed up in the larger hatches and the greater strength chine renders us independent of the vacaries of the broody hen, and enables us to get chicks when we want them. How much this means, a study of market prices reveals. Everyone knows that the price of eggs is very the fact that the hens have not recov ered from moulting and the pullets have not yet begun to lay. Obviously then, if we want eggs to sell when hickens of the American varieties in April or May, and of the Mediterran pullets for growth, so they will be mature and laving by November. The same thing holds good with chicken for market. The greatest profits an made by putting our eggs, our broil ers and our fatted chickens for the ne or export trade upon the mar

prices highest. are apt to be vexatious delays in ship-

follow implicitly the directions that accompany the machine. Study carefully the instructions regarding the care of the lamp and the control of temperature, the turning, cooling and testing of the eggs, and all other details. Then, when hatching commences, let the machine alone. It is too late to rectify mistakes in management, and interference can only injure the hatch. The chicks should be left in the machine until they are thoroughly dry, and should not be fed the first day. When feeding commences be careful to feed sparingly.

More small chicks are killed by overfeeding the care of the machine until they are thoroughly dry, and should not be fed the first day. When feeding commences be careful to feed sparingly. accompany the machine. Study car

atment of the wounded. Sick Headache This distressing ailment results from

CALVING COWS

There is no more important period in a cow's life than at calving time. Many thousands are lost every year at this time, because the animal's system is not in such condition as to stand the strain. The feeding of Clydesdale Stock Food a sufficient time before and after calving will tone up the System so that no trouble need be feared. Read what Mr. J. A. Lever, Fleaherton, Ont., says:—"I have found it an excellent preparation for feeding cows before calving and never had cows do better after." It cannot be repeated too often, "don't let the calf loose its calf flesh." It cannot loose it without stunting its growth. The raising of "Baby Beef" or early fattened beef, the highest priced beef on the market, is easily done if the calves are kept growing. If this can be done, you can easily realize from one to two cents a lb. more than otherwise. There is nothing better with skimmed milk for calves than Clydesdale Stock Food. Mr. Gregory McIntyre, Secretary, Farmers Institute, Renfrew, Ont., says:—"I have been using your food on my eleven calves, and consider they are the best lot I have ever raised. The only other food being skimmed milk and grass." If you are not satisfied after feeding Clydesdale Stock Food, your money will be cheerfully refunded by our dealer. Sold in your district by There is no more important period in a cow's life than at calving

Her Sanitarium in the Back Yard of

culosis in Old Surrey Set on

New York, Feb. 6.—Mrs. Ernest W. Decker, of No. 36 Belleville Avenue, Newark, N. J., who is suffering from tuberculosis, is trying the by her husband in the yard in the rear of their house. It consists of an old surrey raised on top of four dry goods boxes, so as to keep it a safe distance from the damp ground.

Every morning Mrs. Decker, after dressing herself in warm clothing, walks out to the surrey and, after seating herself, is tucked up snugly in blankets by her husband. Throughout the day she sits there with only her face exposed to the elements. Her diet consists of nine eggs and three and in the vard in the real diet consists of nine eggs and three quarts of milk each day.

Since she began the treatment, a month ago, she has gained seven pounds, and is considerably stronger. She is confident that the treatment will effect a permanent cure in her case.

Drunkenness on the Increase in Canada

Dominion government show that drunkenness is on the increase. This applies only to the male population.

The record indicates a growth of temperance among the woman of Canada. The convictions by provinces were as follows:

Provinces.
Prince Edward Island,

North-West Territori?s, 12727

During the present war the Japanese have followed the new rule generally of not amputating shattered limbs on the fields of battle, but of putting a plaster of paris dressing on them. So far, out of 600 wounded Russians, only one arm he heep amputated and only one arm has been amputated, and in that case the arm had to be removed in consequence of trouble super-weight in all cases the bones have healed well. It is clear that the gur-shot wounds from the modern infantry rife are less dangerous to life than they were in former days. Wounds re-ceived in the lungs or stomach heal often without any surgical treatment or operation. All pieces of shot or garments taken from wounded men are sent to Tokio, where they are being preserved, as are also all other "pre-
