

SHOW YOUR FRIENDS

Just now everyone is interested in their flower garden. When discussing your flower garden with your friends, show them the last copy of *The Canadian Horticulturist*. They will be greatly interested in such a paper at this time of the year. It will be easy for you to secure their subscriptions, and thus take advantage of some of our premium offers.

Get a Fountain Pen

For two new subscriptions, we will send you free of cost, a 14 kt. Gold Fountain Pen, fully guaranteed. It is well worth a few minutes' time spent in securing the two new subscriptions. Many of our readers have secured pens and are well pleased with them.

A Free Subscription

Renew your subscriptions for one year without sending us any money, by securing two new subscriptions at 60 cents each. Or, we will extend your subscription six months for one new subscription.

Cash Premiums

If you wish we will pay you cash premiums on any new subscriptions you may secure. Write for fuller particulars.

PETERBORO, ONT. LIMITED

PROTECT YOUR FRUIT AND VEGETABLE CROPS AGAINST INSECTS

However well you may have sprayed before the buds opened you are bound to have some Scale, Aphis or leaf-eating insects upon the trees when covered with foliage.

COOPER'S V2 and V3 SPRAY FLUIDS

Will kill all such pests, and they are both a benefit and a cure. If properly applied they cannot fail. They re-invigorate the trees and keep your fruit and vegetables clean.

V3 contains a stomach poison, and is specially designed to control leaf-eating insects, such as the Codling Worm, Potato Bug, etc.

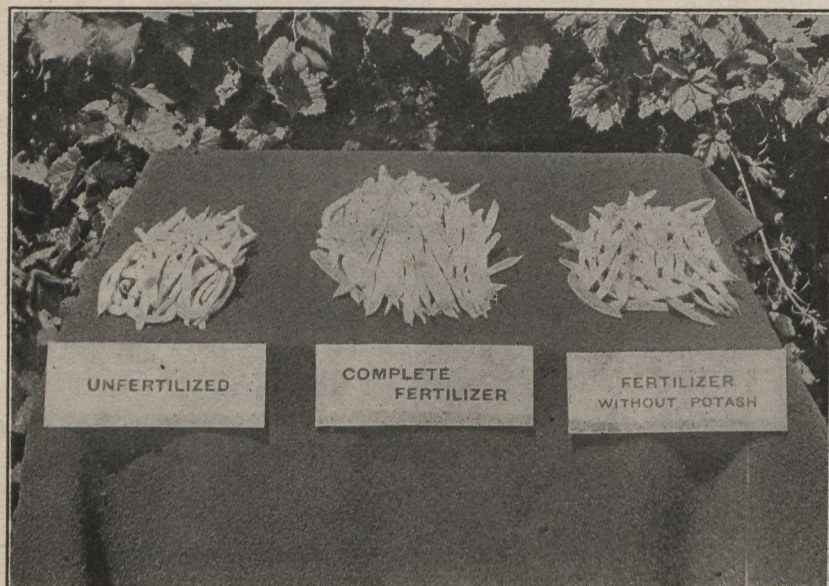

One gallon of fluid makes 100 of spray and mixes instantly with cold water. It does not injure the hands or burn the leaves.

V2 AND V3 FLUIDS The Summer Sprays

Experiment on WAX BEANS, 1908, conducted by V. G. Hector, Erindale, Ont.
PLOT 1 PLOT 2 PLOT 3

Muriate of Potash	180
Acid Phosphate	420
Yield Per acre	720	1194	738 baskets

This experiment shows an increase of 456 baskets directly due to the application of POTASH

POTASH

as an ingredient of a "Complete Fertilizer" is indispensable for all Orchard and Garden crops. This important "plant food" not only increases the yield and improves the quality of the product but it also **hastens maturity**, thus making the crop more valuable. POTASH can be obtained from all leading fertilizer dealers and seedsmen in the concentrated forms of

SULPHATE and MURIATE OF POTASH.

Copies of our publications including:

"Potato Crop in Canada"
"Fertilizing Orchard and Garden"
"Fertilizing Root Crops and Vegetables"
"Farmers Companion," etc., etc.

will be mailed free to any address in Canada.
