Canada Car 108 5 known to the general public, the Goldfields Mining Company has been persistently at work for three years laying the foundation of what they hope will in 20 a comparatively short time be a commercial industry second in magnitude to 106 no gold mining proposition in Canada.

With funds provided entirely by the with funds provided entirely by the "insiders," most of whom have either insuected the property personally or have engaged an engineer to do so, this company has been tracing the sheared zones over a large area, purchasing a rich claim here, securing a massive ore body there, making in the aggregate an enormous acreage. There has been developed hundreds of thousands of tons of ore on one enormous dyke, which is but one of several, offering equal promise.

They have accomplished over one thousand feet of shaft sinking, hundreds of feet of drifting and many hundred feet of open cut work. They have cleared hundreds of acres of mineral lands. They have been hydraulicking the surface and have diamond drills to prove values at depth. They have been assembling claims in groups for their most advantageous and economical operation, acquiring valuable water power right; acquiring valuable water power right; acquiring

have diamond drills to prove values at depth. They have been assembling claims in groups for their most advantageous and economical operation, acquiring valuable water power rights, and producing electricity with which to prosecute their objects. They have sampled, milled and treated many tons of ore at their experimental mills, they have made analysis of their ore values by the hundreds, and have decided on the centralization of all mining and treatment at two plants, each of which will be capable of handling hundreds of tons daily, and they estimate sufficient ore in sight to maintain this capacity for a generation.

With ore bodies in close proximity to water, and having a width of from one hundred to two hundred and fifty feet, with natural facilities for drifting on their ore bodies at the four hundred foot level and using gravity in their operations, with their own electric power produced at a minimum of cost, this great undertaking is favorably comparable in possibilities with either of the two greatest industrial gold mining enterprises in America, viz.:

The Alaska dastineau has an average recoverable value of one dollar and fifty cents per ton, and with total mining costs for mining, milling and treatment of seventy-five cents per ton of ore, yields a net profit of eighty cents per ton.

The Alaska Juneau, with an ore value of one dollar and forty-five cents per ton, with total costs of mining, milling and treatment of eighty cents per ton, yields a profit of sixty-five cents per ton.

COBALT, Nov. 2.—In Catharine Township, about one and a half miles east of Mindoea, mileage 151. Joseph McDonough has a spectacular find of free gold extending over two claims. A strong quartz vein with an average width of four feet has been uncovered, and assays taken across the vein have shown exceptionally high values. The claims are in greenstone formation, and the quartz vein carried remarkable showings of free gold and tellurides. MONTREAL GRAIN MARKET.

MONTREAL, Nov. 2.—The foreign demand for Manitoba spring wheat was good again today, and cables were strong at an advance of 3d to 6d per quarter, but owing to the further rise in the Winnipeg market they were out of line at the close, and little business was done. There was some demand for wheat on spot, and sales of 80,000 bushels of No. 1 northern were made at \$1.08 c.i.f., bay ports. The demand from local buyers for oats was good, and sales of 170,000 bushels were made. Flour was active. Milifeed is in good demand and steadier.
