

# Printers'

# Rollers

Without the best rollers the best printing is impossible. The best rollers can be made only by means of the best machinery and materials. . . . .

## An Expensive Roller Plant . .

is one of the features of Toronto Type Foundry. The old-fashioned method of pouring rollers into the moulds is now obsolete. Our roller-moulds are filled under pressure, which makes a solid roller free from air bubbles. This ensures a roller with a perfectly smooth face and free from soft spots due to air bubbles beneath the surface.

## Rollers Cast Under Pressure . .

besides doing better press work than the old-fashioned hand-poured rollers, are much more lasting and in every way superior. They cost no more, notwithstanding the expensive machinery necessary to make them by this modern process.

## Our Roller Business . .

has been rapidly increasing, due to the very superior article we have been supplying. We have facilities for doing a much larger business, and will be pleased to have a sample order from those who have not tried our rollers.

## Every Roller Guaranteed . .

to be perfect. It will not pay you to make your own rollers. You can save trouble, time and money by sending your cores to us, and you will have the certainty of always receiving a perfect roller.
