

SEPTEMBER.

On the 23d of Sept. the Sun enters the constellation *Libra*, or the Scales, containing 51 stars and being the seventh sign of the Zodiac. The sun at this period is perpendicular over the equator, and as it enlightens half the globe 90 degrees every way, the rotative circles are cut into equal halves from the north pole to the south; consequently at this time the day and night are equal all over the globe—and hence this constellation is called *Libra* or the Scales.

To Preserve Wheat.—Kiln dry it and put it in cubical cases of earthenware, glazed on the outside, and filled full as possible; cover them by a piece of the same ware made to fit close, and secured with a mixture of pitch, tar, and hemp cloth, till the whole be made air tight. A case of this kind might be made which would hold four bushels or a quarter of wheat.

The same temperate weather which characterized the last part of last month, will continue until the 9th of this,—after which period we may expect much rain, together with heavy gales of wind, until the 25th, when it will become more settled, and clear cold weather will ensue, which will last but a few days.

Third Quar. 2d 6h 32m evening First Quar. 17d 11h 7m even.
New Moon, 10d 7h 28m even. Full Moon, 24d 6h 39m evening
