

sidered a good investment, and for this reason the greenhouse should be located in the best possible place from a labor-saving standpoint. Possibly the securing of fuel at a reasonable cost is the largest item for consideration, and next to that the marketing of the produce. Where the grower is at liberty to start his plant close to a railroad—either a steam or an electric line, which will haul freight and express—he has considerable advantage over those who cannot. The proximity to a railroad which assures good service is a very valuable asset to a greenhouse

Boiler Room Located so as to Minimize Hauling Operations.

grower, and should be carefully looked for before an extensive plant is built. Long hauls of fuel and supplies mean an added outlay of capital which should be invested in the plant. At the present time as much of the hauling operations are being eliminated as possible and being done by means of having a switch right on to the owner's place, and in the majority of new plants running up on a trestle so that the coal can be unloaded into the coal hoppers or bins with the least possible amount of handling.
