duce queens a whit better than those the bees will rear in a colony, you have made queenless, so long as they We have young enough larvæ to select ons After the larvæ have become from. the too old they may still start cells, and these will produce poor queens. If our you give to a nucleus or a colony two the

or three good looking cells, there is small chance of a poor queen. Or you may give to the queenless colony a fresh frame of brood and eggs five or six days after being made queenless, and then you need have no fear of poor cells on any of the previous frames."

Canadian Honey Exhibit at the Pan-American.

We received the Gold Medal ard for the collective exhibit and h individual exhibitor will receive diploma." So wrote Mr. John wton, President of the Ontario Keepers Association, on his refrom the Pan-American after ding up satisfactorily the business onnection with the Ontario honey ibit. Well done Ontario ! We with pleasure the following espondence by F. W. L. Sladen

in the "British Bee Journal" in this connection.

Their (The Ontario Bee-Keepers Association) display was really magnificent.

It consisted of the produce of about twenty-three exhibitors from different parts of the Province, and of one from the Province of Quebec. A large quantity of the honey was in glass jars of various sizes. All the comb-honey was in shipping cases, as in the New York exhibit, but little towers of sections, and extracted
