

MODEL F-A

## Baby Grand Touring Car

A New, Efficient and Powerful Model  
which materially reduces motoring cost.

Now that the motor car is a necessity to crowd more into the busy day there is a demand for a sturdy, roomy, powerful car, economical to buy and economical to run—a car that is comfortable and will give good service day in and day out.

This new Chevrolet model fills this demand and is offered at a price far below that warranted by its value, and represents more CAR for your money than any new model on the market. See this model before you buy.

look facts in the face. Farmers are willing and anxious to do all they can to increase production, but if the Government, in some way or other, does not furnish more help, I am very much afraid instead of increased production it will be the opposite.

### The Farm Well.

Good water is as essential as good food for the maintenance of health in the family and the thrift of the farm live stock. An ample supply of pure, wholesome water is not only a blessing of inestimable value but one of the most valuable assets a farm can possess. There is no country in the world with a greater abundance of pure water in lakes, rivers and springs than Canada and there is no insuperable difficulty in the larger number of our agricultural districts in obtaining a supply ample and pure.

A glance through the Annual Reports of the Experimental Farms shows that the Division of Chemistry is doing a valuable work towards the improvement of the farm water supplies throughout the Dominion. In the course of the past thirty years many hundreds of samples from farm wells have been analysed and reported on. A perusal of these reports shows that year in and year out only about one-third of the waters were pronounced as pure and wholesome, in other words, were free from excretal drainage matter. This is not as it should be and the reason is not hard to find. In too many instances convenience only has been considered in locating the well. For the most part we find these polluted wells under stables, in barnyards or dangerously near the privy or where the slops from the farm house are thrown out. Wells in such locations can never be depended on to yield pure water. They must sooner or later become polluted by filth draining into them from the surrounding soil, which inevitably becomes saturated with manurial products. These wells indeed act as cesspits and the records show not a few instances in which the water of such wells possessed a distinct fertilizing value from the presence of excretal matter.

The lesson from these facts is: don't sacrifice health to convenience, locate the well at a safe distance—50 to 100 yards at least—from any possible source of contamination. A bored or drilled well tapping a deep seated source, tightly sealed off at the junction of the soil and rock, is likely to give the purest supply. If a dug well, line it to a depth of 10 or 12 feet with concrete or puddled clay, 4 to 6 inches in thickness, to ensure the exclusion of water from the surface layers of soil. Keep the surroundings of the well absolutely clear from the accumulation of filth and preferably in the grass. Make provision to carry off the waste water from the pump, so that it may not re-enter the well and so protect the mouth of the well that surface water cannot flow in and mice, frogs, snakes, etc., are excluded. With wells such as these pure water may be secured. A wind-mill, gasoline engine or hand force pump will be found a paying investment, enabling the water to be piped to the house, stable and barn, thus securing running water in the farm buildings—a convenience and blessing that needs only to be experienced to be appreciated.—Experimental Farms Note.

### The-Know-It-Alls.

In our little town, Oh! sad to tell,  
There is a merchant who doesn't know how to sell,

A sawyer who doesn't know how to saw,  
A teacher who doesn't know how to teach,  
A preacher who doesn't know how to preach,  
A painter who can't paint very well,  
A printer who doesn't know how to spell,  
An odd-jobs man with never a job,  
A cobbler who doesn't know how to cob,  
A miller who doesn't know who to mill,  
A butcher who doesn't know how to kill,  
A racer who doesn't know how to race,  
A mason who doesn't know how to mace,  
A clock smith who cannot mend a clock,  
And a doctor who doesn't know how to doc,

And since none of these are busy men,  
You will find them again and yet again  
Ever anon and a few times more,  
Round the stove in Mendelson's store,  
Each talking freely and through his hat  
Doing the one thing they are expert at,  
GIVING ADVICE TO FARMERS.  
—News Notes, Col. Agr. College.
