

and determined many of his specimens of Noctuidæ. Many of these collected at Cartwright, Man., were described as new species by Dr. Smith. For many years Mr. Heath was a valued correspondent of the late Dr. James Fletcher, and it was through Dr. Fletcher that the writer became acquainted with him. I have been in constant communication with Mr. Heath, particularly with regard to important captures, records of which have been included in the "Entomological Record", published annually in the Report of the Entomological Society of Ontario. Like other Canadian entomologists, I have always found him a most enthusiastic collector and an exceedingly interesting correspondent. I shall indeed miss his friendly and helpful letters.

Mr. Heath was a regular contributor to this journal, his papers being chiefly records of Lepidoptera occurring at Cartwright. Many of these were new records for the province.

The last article he published appeared in the April, 1914, issue of the Canadian Entomologist, and was entitled, "A Phalangid Drinks Milk".

A. G.

---

The following note was received from the late Mr. E. F. Heath about a year ago, but by an oversight its publication has been unduly delayed.

THE EDITOR OF THE CANADIAN ENTOMOLOGIST,  
Dear Sir:

On the night of the 8th inst. (1912), I captured at my "sugared" trees a specimen of *Thysania zenobia* Cram. in very good condition. I can only account for its appearance on the supposition that it must have come north, in the pupal stage, in a bunch of bananas, or by some such means. That I should get it is the more extraordinary for I lie between three villages, the nearest being four miles distant, and the other two, six and seven miles respectively.

Yours faithfully,

E. FIRMSTONE HEATH.

The Hermitage, near Cartwright, Man.

Mailed August 14th, 1914.
