Panopepton a Food by Itself

We have, as a rule, recommended PANOPEPTON to be taken pure, or simply diluted with water, for the reason that Panopepton is by itself the most agreeable, comprehensive and adequate nutrient for the sick. PANOPEPTON does not require to be "mixed with milk", soup, or any other food. Used by itself, Panopepton is placed on its merits as a food for the sick, and the physician is thus enabled to form a correct estimate of its peculiar value and importance as a food per se.
