# THE STRENGTH OF VITRIFIED SEWER PIPE.

The results of recent experiments lead to the conclusion that the average ultimate tensile strength of the material composing American vitrified sewer pipe is, at least, 600 pounds per square inch.

- 2. That the average pipe will safely stand any ordinary shock or blow.
- 3. That the average pipe will support 2,000 pounds at its center when supported at points 16 inches apart.
- 4. That the average pipe will support 2,000 pounds per lineal foot when bedded in sand.
- 5. That cement joirts made with the ordinary bell and spigot are not safe when subjected to pressure, unless the pipe is prevented from moving longitudinally.
- 6. That ring joints are but little stronger than the ordinary bell and spigot joints when the pipe is unconfined.
- 7. That the improved joint with grooves is stronger than the two mentioned above.
- 8. That if the pipe is confined, any of the three joints mentioned, if carefully made, will probably hold as long as the pipe remains whole.

## A COSTLY EXPERIMENT WITH RUBBLE CONCRETE.

In building the Irvine branch of the Lanarkshire and Ayrshire Railways in Scotland recently, as described in a paper presented to the Institute of Civil Engineers, March 13, 1891, by William Archer Porter, Stud. Inst. C. E., rubble concrete composed of "irregular sized stones, set and packed solid on all sides with concrete," was used for the foundations, abutments and piers of bridges, retaining walls, culverts, etc.

The concrete, formed of cement, sand and broken stone (1 to 5), was first deposited in a 6-inch layer at the bottom within timber framing coated with seft soap. Large, rough stones up to 2 tons were then laid 3 inches from the frame and from each other, and the intervals packed with concrete; upon this course followed another 6-inch layer of concrete, then another course of stones, and so on, the concrete near the front boarding being specially ramined to form a smooth face. The framework was left on for two days after the completion of the work. The cost per yard is not given, but the statement is made that owing to the quantity of cement used it nearly equalled that of rubble masonry, notwithstanding that skilled labor was largely dispensed with, and although daily progress was rapid.

One of the bridges, the viaduct over the River Garnock, having seven semicircular arches of 50 feet span, was built on a gradient of 1.4 per cent., partly on a 3-foot curve, the rail level being 70 feet above the river. Soon after its completion a crack was observed in the higher abutments. It was found that both the abutment and the adjacent pier "had settled." The next pier, "which was standing on rock," had remained firm, and a forward movement of the abutment and first pier had contracted the second arch, causing it to rise 5 inches at the crown. After

ineffectual attempts to depress the crown to its normal level by weighting it with 200 tons of rails and sawing through the bed-joints at the keystone, inverts were laid between the piers across the first three spans, which stopped the movement. The spaces in the haunches were then filled with concrete, and a bed of concrete 2 feet thick was laid over the first three arches. The inference is that the settlement was due to the abutment not being on rock, but the strong probability is that it was the result of the flimsy construction, the stones being far too large to be used in the way indicated on account of the difficulty of making bond between them and the concrete packing. Engineering Record.

#### TO BUILDERS.

### ALEX. MACLEAN,

9 Victoria Street, Toronto,

Ofters to builders, on advantageous terms, lots on Elizabeth St., Westmoreland Ave., Spencer Ave., Shaw St., Wellesley St. and Spadina road.

#### To Builders, Investors and Speculators.

Offers are invited to purchase that magnificent business site at the intersection of Dundas and Arthur streets and Ossington Are. The lot has a frontage of 100 feet on Dundas and 120 feet on Arthur St., and is undoubtedly the best business corner west of Yonge St. Offers to be sent to F. J. Smith & Co., Estate Agents, 90 Church St.

# J. A. NESBITT, ESTATE AND FINANCIAL AGENT AND ARBITRATOR.

Office: 9 Adelaide St. Kast, - TORONTO.
Office Telephone 1631. House Telephone 3692.
Money advanced on mortgage. Fire insurance at lowest rates. Values carefully estimated.
