

THE National Prescription Blank Company of Cincinnati, Ohio, wishes to notify all of its customers, and the drug trade in general, that the only person connected with that concern by name of "Kauffmann" is its President, "E. John Kauffmann," of Cincinnati. No other person of this name is employed by, or in any way, manner or form, interested in, or connected with, the National Prescription Blank Company. They never permit any of their salesmen or representatives under any circumstances to make draft on their house, and they wish to herewith notify the drug trade that any one attempting to do so would be acting fraudulently.

ABORTION DURING ACUTE ALCOHOLISM.—Draprier (*Archives de Gynec. et d' Obst.*) states that a young woman, aged twenty-eight, pregnant for the sixth time, drank off nearly 1

litre of pure brandy, apparently for a freak, as she was naturally temperate. Ten minutes later she was found dead drunk on the ground in front of her house. Eleven hours later Drappier was called in. The woman was insensible, the respiration stertorous; a sanious froth covered the lips, and the breath was very alcoholic. Venesection and ether injections were tried, and acetate of ammonia in coffee prescribed. The patient became conscious twenty-seven hours after taking the brandy, labor pains setting in. Five hours later two infants deeply cyanosed and quite dead were born spontaneously. One hour after delivery Drappier visited her. The patient was quite livid, the pulse too rapid to be counted; she suffered from severe headache and talked incoherently. Yet the uterus was well contracted. One hour later she expired.—*Brit. Med. Jour.*

## Study Is the Heart of Progress . . . .

"Let then thy feet no more thy corns abuse,  
One proper study of mankind is shoes,  
Ill-fitting shoes admit of no defence  
For want of fit shows want of common sense."

## LAKEHURST SANITARIUM

~~~~~●~~~~~ Oakville

The attention of the medical profession is respectfully drawn to the uniform success attending the treatment of Alcoholism and Morphine addiction at Oakville. A prominent medical man in Toronto has, within the last few weeks, paid a glowing tribute to its efficacy in the case of one of his patients who had long since lost his susceptibility to the ordinary form of treatment employed, and whose life seemed to hang in the balance. Many come to Oakville in the last stages of the malady, yet of these but two cases in four years have proved to be beyond reach of our treatment, a record well deserving the thoughtful consideration of the profession. For terms, etc.
