

THE PROPERTY.

The property consists of 327 acres of land in fee-simple, without the least incumbrance of any kind. There is no royalty except what may be levied by the Crown in common with other mines in Canada.

THE VEIN OR BED.

The vein, or bed, — ten feet wide, — runs diagonally across the Company's property for a distance of a mile, while close to the ore-bearing bluff are streams of never-failing water, affording every facility for crushing their ores, and washing, while the entire property is covered with a growth of timber and wood for building purposes, sufficient for the Company's operations for the next twenty years. It is expected that the Company possesses a sufficient extent of the mineral-bearing rock, on the run of the vein, to form at least two more companies for extensive mining, which, if this should be the case, will be sold for the benefit of the present owners and subscribers to the stock of this Company, enhancing, it is hoped, the value of the stock to a great premium.

THE MINE AS IT IS.

The mine, as it is, has all of the necessary buildings upon it, with all the mining tools required, and provisions for the entire season's operations, and is under the superintendence of the well-known and accomplished mining engineer, Herbert Williams, Esq., of Harvey Hill Copper Mines, and the work upon it will be vigorously carried on, both for gold and copper ores, until it proves a dividend-paying concern.

THE PROSPECTS OF THE COMPANY.

The prospects of the Company are highly promising, from the presence of gold, so recently found upon the property. The discovery of gold in the township of Weedon, which
