

make every improvement necessary for the comfort and convenience of the large and constantly increasing number of students who year after year fill her classes.

Students of Trinity Medical School have, under its Special Act of Incorporation, and its affiliation with the several Universities, every privilege enjoyed by any Medical Institution in the Dominion.

LECTURES.

The several Professors and Lecturers will illustrate their respective courses by plates, preparations, models and specimens—including the application of the Laryngoscope, Ophthalmoscope, Sphygmograph, Spectroscope, and the various forms of electrical apparatus used in medicine. It will, as heretofore, be the constant aim of the Faculty to make the entire teaching of the School as practical as possible.

PRACTICAL ANATOMY.

To the Department of Practical Anatomy, so closely connected with Surgery, the greatest attention will be paid. It will be under the direct supervision of the Demonstrator, who will give daily attendance in the Dissecting Room for the benefit of students. This room is large, *very well* lighted, and perfectly ventilated; and the utmost care has been taken to secure an abundant supply of Anatomical material. It is the desire of the Faculty that every student should acquire a thoroughly practical knowledge of Anatomy in the Dissecting Room.

CLINICAL INSTRUCTION.

Very special attention will be devoted by the Faculty to the giving of Clinical Instruction, including Clinical Lectures, and teaching the diagnosis of medical and surgical diseases at the bedside, within the Hospital, as they consider nothing so important to those engaged in the study of medicine and surgery, as a close and careful observation of the numerous cases in the Hospital wards. Arrangements were made some years ago, and will be maintained, which have very largely increased the amount of clinical instruction given in the Toronto General Hospital, and afford all students who attend it, as great facilities as are enjoyed in any part of Canada, in this essential department of their studies. Besides this, the number of Hospital patients is now very large. The School being so near this Institution, will enable students to avail themselves of all the many advantages for gaining practical knowledge which it affords.

CHEMISTRY.

General Chemistry, and Chemical Physics, will be taught by Professor Kirkland, who will give a full course on these subjects, illustrated by experiments, and otherwise.
