

Farm Matters

When the farmer feeds the hogs and let them...
The successful farmer is the reading one in nine cases out of ten. It is only by reading that one can keep up with the times in which we live. It has been said that an agricultural community without books and papers relating to farming is like a ship at sea without rudder or compass.

Bones can be reduced in the following manner: Place at the bottom of a barrel a layer of red three inches thick, then a layer of fresh manure two inches thick, next a layer of broken bones two inches thick, and let the next layer be of wood shavings three inches thick. Commence the next layer with the manure, following with the bones, and continue the layers until the barrel is full. Pour water in until the manure is saturated, but do not let it run away to waste. Keep the barrel damp with the water that runs off, adding warm water from time to time to supply the loss by evaporation. In a few weeks the mass will be thoroughly decomposed.

It is most profitable to make pork from young pigs. A bushel of corn will produce more pork from a pig raised from a piglet than from a pig raised from a piglet. The cost of producing a given weight of pork increases with the age of the animal. It is desirable to produce an increase of one ton of pork by feeding 100 pigs, that increase will be more readily obtained by feeding pigs under a month of age, than by feeding those which are a year old, or older ones. The number who allow their young pigs to have any allowance of corn, or to permit the opportunity for profitable feeding to a pig, is very small. It is a mistake to allow a pig to increase in weight, by feeding him more than he can profitably consume.

The increase in a flock of sheep that a good range and is well taken care of, is very rapid, and by the use of improved blood the flock can soon be made profitable. In the case of the Mexican sheep, adds not only the increase in the number of sheep, but also the quality of the wool. The Mexican sheep has a good quality of wool, and is also a good range and is well taken care of, is very rapid, and by the use of improved blood the flock can soon be made profitable.

When the farmer feeds the hogs and let them...
The successful farmer is the reading one in nine cases out of ten. It is only by reading that one can keep up with the times in which we live. It has been said that an agricultural community without books and papers relating to farming is like a ship at sea without rudder or compass.

He may let them eat at will from the stack of the best hay that is made...
The Canadian Farmer gives the following hints in reference to fruit-tree culture: Let. Instead of "trimming up" trees, according to the old fashion, to make them long-legged and long-armed, trim them down so as to make them even and symmetrical.

Fruit-Tree Culture.
The Canadian Farmer gives the following hints in reference to fruit-tree culture: Let. Instead of "trimming up" trees, according to the old fashion, to make them long-legged and long-armed, trim them down so as to make them even and symmetrical.

It is said that some cannibal fathers eat their children. That's a terrible thing. There is a man at Menlo Park who's Edson.
"May I hope," was on the lounge that he handed to her, and when she crossed over the last, "I'm glad you're here before 'May,'" he suddenly discovered he had an engagement elsewhere.

Who cut your mouth so big? asked a Grifflintown Zulu of a lady friend. "Don't know," she replied. "The Lord." "Awfully careless," he responded as he dodged a flat-iron.
The enormous sum of \$322,000,000 is invested in the rubber business in the world, supposed to aggregate 64,000 miles in length.

England has thirty electric light companies, with a capital of over \$30,000,000. Nearly as much money is similarly invested in France.
Some kinds of stains may be removed from silk by the application of essence of lemon, one part; spirits of turpentine, two parts; and water, four parts. Mix, and apply to the spot by means of a linen rag.

The Winnipeg Free Press says: "Water at Regina has to be hauled nearly four miles, and costs for hauling a barrel a man who keeps other under such extraordinary circumstances deserves to be congratulated on his perseverance."
The doctors had given up and said could not be cured. 75 cents a bottle. Dr. J. A. Hacking's Catarrh Cure.

A curious case of "puzzle" occurred a few days since in a provincial town in Ireland. Three sailors went into a general shop—meaning, where almost everything is sold—and asked for a "shilling's worth of bread." As they were about to pay for it, a companion entered, and on hearing that they had bought, asked the dealer to give whiskey instead. He did so, and they were walking quietly, and on the shopman said, "Hallo! you didn't pay me for that whiskey?" "Didn't I give you the bread for it?" said the sailor, to his annoyance, for some time. "And sure I didn't eat your bread," cried the sailor, and walked calmly away.

In these times of quack medicine advertisements everywhere, it is truly gratifying to find one remedy that is worthy of praise and which really does as recommended. There are many such, and we recommend them. They invariably cure Stomach and Liver Complaints, Diseases of the Kidneys and Urinary Difficulties. We know whereof we speak, and can readily say, give them a trial. Sold at fifty cents a bottle, by Dr. J. H. Michener, W. E. Greaves, Sec. Treas. No. 2, J. McCraig, G. Payne, No. 3, J. Brennan, H. H. Hixon, No. 4, J. W. Bennett, J. W. Bennett, J. W. Bennett.

Housekeeper's Hotchpotch.
Fried Turnips.—Scrape, cut into strips, and boil until tender in a circle at the bottom of a barrel, made with one egg beaten light; one half cup of milk, and four enough to make a batter, and fry in hot butter or oil. **Roast Spareribs.**—Take a nice sparerib with part of the tenderloin left in season with salt and a little pepper; sprinkle with summer savory; put in a shallow tin with a little water, and roast until nicely browned and tenderly well done.

Roast Potatoes.—Wash and cut in halves or quarters, put on long water, boil one half hour, when done, pour off the water, adding salt; mash perfectly smooth, then add cream if you have it, or milk, and beat with fork until smooth. The heating makes them light.

Turkey Stuffing.—Many a farmer cooks extra turkey in preparing a fine meal of stuffing, veal, ham, bacon, onions, potatoes, or bread, and all sorts of things. But the ordinary old-fashioned stuffing for a turkey is generally light and good. Take the neck part of a good light brood (not the cranial) do not wet it, as it usually does, but rub it dry and fine, and work into it a piece of butter soft as butter, and mix with pepper and salt over with water; roll out the top crust quite thick, and close the poultry in the middle with a knife, let it bake rather more than an hour. If you warm a pie over for the next day pour off the gravy, and warm it separately, and add it to the pie.

Roast Turkey.—The secret in having a good roast turkey is to stuff it palatably, to roast it often and to cook it long enough. A small turkey, seven or eight pounds, should be roasted or baked three hours at least. A very large turkey should be cooked a longer time. After the turkey is roasted, season with a little salt and pepper, and salt on the inside; stuff it and tie it well in shape; either lay the top or lay slices of bacon over it, wet the skin with water, and sprinkle with pepper, salt and flour. It is well to allow a turkey to remain some time stuffed before cooking. Pour a little boiling water into the bottom of the trussing pan, just before taking it out of the oven put on more melted butter and sprinkle over more flour; this will make the skin moist and brown.

Tired of Suffering.
An Ex Police Officer's Story—The Agony is Over.
"IT DID NOT FAIL HIM."
(Sarniamto (Ont.) Record Union.)
Mr. M. Hymen, proprietor of the Pioneer Store, No. 102 1/2 street, is now one of the happiest men in Sarniamto, whereas a few days since he lay in bed, groaning in pain, and unable to get up. He had been suffering from rheumatism, and the pain was so severe that he was unable to get up. He had been suffering from rheumatism, and the pain was so severe that he was unable to get up.

Shut out the Cold.
The temperature of the living animal cannot vary greatly, and therefore when the weather grows colder there is an increased demand for food to be consumed in keeping up the natural heat. A warm temperature is an expensive consumption, as every farmer who has wintered his stock well knows. There are two essential methods of overcoming the wear and exhausting effects of severe cold weather; first, by giving the animals an abundance of rich and palatable, heat-forming food, and securing them from exposure to cold and uncomfortable stables. A combination of these two methods is the one to be provided by every stock raiser, and it is the one that cannot be neglected in any case.

How it Works.
Malarial Disease, so prevalent in the Spring and Fall, such as Ague, Chills, Fever, &c., depend upon an infection of the system by the malarial germ, which enters the system through the pores of the skin, or through the nose, or through the mouth. It is a disease of the blood, and it is the duty of the physician to remove it from the system, and to restore the blood to its normal condition.
