

part of the practical work was undertaken while the author was associated with the Pathological Laboratory of the Royal Victoria Hospital at Montreal.

I am very much indebted to my former chief, Professor J. G. Adami, for his criticisms and suggestions on this paper. Although, in respect to the nature and cause of intimal sclerosis, our views do not entirely coincide, a lengthy discussion on this topic has been omitted as not bearing directly on my subject. For the fuller treatment of intimal arteriosclerosis, I refer the reader to our respective articles in the *American Journal of Medical Sciences*, 1909, and in the *Journal of Experimental Medicine*, 1910.
