Buying Goods Through The Eaton Catalogue

The Eaton catalogue is generally accepted as the standard price-maker of Western Canada. It stands for all that is fair and just in the field of merchandising. There is no trepidation on the part of the people of the West in ordering their entire supplies through this medium, because they realize that all the risk of dissatisfaction has been entirely eliminated by the generous and far-reaching Eaton guarantee. If a customer is displeased or disappointed in the smallest degree with his purchase, he knows that he is at perfect liberty to return it and all the transportation charges will be paid and the purchase money refunded. This brings every advantage of a high class city store right into the most remote districts.

Threshermen's Needs

Everything should be in readiness before the rush of the harvest commences. Then there is time to think of nothing but the gathering in of the golden harvest. Our catalogue should be gone over carefully and all harvest necessities ordered in good time.

On page 119 the overalls and smocks are described, and they are all good, hard-wearing garments at a very low price.

We make a specialty of our Gauntlets and Working Mitts, and they are splendidly illustrated on page 101.

We have a drill shirt at 50c. that is positively without a rival at anything near the price. This is shown on page 132.

Boots, Socks, and Suspenders are articles that get hard wear during the harvest, and they should be attended to early.

DO YOUR OWN HAY BALING

THE hay press of real value to the farmer is the press that enables him to do his own hay baling.

There is unquestionably a great advantage in owning your own hay press.

You have ample time to bale your hay during the late fall and early winter months, and

The money you will save by doing your own baling rather than having it done by the contract baler will pay better wages for you and your horses than you can make any other way.

I. H. C. PRESSES FOR INDIVIDUAL FARMERS

I. H. C. hay presses are well adapted to the use of individual farmers. They are run by horse power, the kind of power you always have on the farm.

They do not require a large force to operate them. Usually there are men enough on the farm without hiring extra help.

They are not such expensive machines but that each farmer can afford to have a press of his own, so he may bale his hay or straw whenever he is ready.

I. H. C. presses are made almost entirely of steel and iron, very strong and durable. They have the great advantage over many other presses in being made on the pull-power principle, by which the plunger is pulled, not pushed.

The presses are made in two sizes. The one-horse, made with a 14 by 18-inch bale chamber can be operated by two men and a boy. It will bale 6 to 8 tons a day.

The two-horse press bales 8 to 15 tons a day. It has bale chambers 14 by 18, 16 by 18 and 17 by 22 inches. This press is well adapted to doing not only your own work, but also neighborhood and contract baling, if you have the time.

Both presses are convenient to operate, easy on the horses (no extra pull when pressure is greatest), and are full circle type, avoiding unnecessary stopping, starting and turning of other presses. The stepover is only 4 inches high.
