

SULLIVAN NEW WATER STOPERS

*Wet Down the Dust,
Don't Wet the Runner.*

Sullivan Water Stoppers lay the dust at the back of the drill hole, as fast as it is made.

The water tube carries the water into the hollow drill steel, surrounded by an air jet which acts as a seal and prevents leakage.

A Single Throttle controls both air, water and feed, and discharges an air blast through the steel before the water is turned on and after it is turned off. This keeps water from entering the front end of the drill cylinder when stopping work.

Two water stoppers are available, (1) a light, hand rotated machine, "DT-44." (2) a self-rotator, with reverse feed and brake, "DT-42."

Sullivan Water Stoppers are a proved success. Runners are enthusiastic, because of the freedom from dust, the fact that they can operate them day in—day out—without a wetting, and because of their simplicity, sturdiness and true running balance.

Ask for new Bulletin No. 670 M.
