

LESSON IV. July 23, 1916.

Paul at Corinth.—Acts 18: 1-22. Commentary.—I. Paul's arrival at Corinth (vs. 1-3). 1. after thes things-After Paul's labors at Athens came to Corinth—Corinth is about 40 miles west of Athens on the isthmus that separates the southern part of Greece from the northern. It could be reached by land or by ses from Athens. The city was the political capital of Greece at this time and the Roman proconsul had his residence Roman proconsul had his residence there. Corinth was great commercial-ly. It was upon the isthmus, and all

land traffic between the north and the south of Greece passed through it. There was a harbor on the Corinthian Gulf, as also on the arm of the Aegean Sea on the east. It is said to have had a population at this time of four hundred thousand, made up of a great variety of nationalities. There were Green adventurers, and Roman settlers, and there were also representatives of eastern peoples. It was a mass of Jews, ex-soldiers, philosophers, merchants, sailors, freedmen, slaves, tradespeople, hucksters, and agents of every form of vice." It was known as an extremely wicked city, and vice was practiced under the name and guise of religion. Corinth was near the seat of the famous Isthmian to which Paul more than once refers in his writings It was in a city of this character that the apostle ertook the establishment of a listian Church, and he met with Christian Church, and he met marvellous success. 2. a certain Jew named Aquila—Paul was a Jew by nationality and he sought out Jews first in the different places where he labored. The name is a Roman one, and means an eagle. He may have taken that name upon his removal to Rome, born in Pontus—Pontus was a Roman province in Asia Minor, border-ing on the Euxine or Black Sea. Pris-cilla—The wife of Acuila is frequently -The wife of Aquila is frequently cilla mentioned in connection with him in the writings of Paul, and appears to have been a capable and devoted wo-The two became close friends of man. the apostle. Claudius had commanded -The Emperor had banished all Jews from Rome because of some tumult that had been occasioned by them. that had been occasioned by them. came unto them—It is not stated that Aquila and Priscilla had as yet em-braced Christianity, but they became Paul's faithful fellow workers later on. 3. of the same craft—Among the Jews it was considered proper that everyone should have a trade. Paul a tentmaker, and as Aquila and Priscilla had the same occupation, and had facilities for carrying on their trade, Paul arranged to live with them and work. tentmakers—What they made was most probably tent cloth. This was made from the shaggy hair of a species of goat found in Paul's native province of Cilicia. Tents were greatly in demand in the east, and the employment as tentmakers was steady and remunerative Paul was determined to earn his own living so

le gospel which he preached. II. Ministry to the Jews (vs. 4-5.) Reasoned in the synagogue every Sabbath-Paul sought out the syna gogue and his own people in every place where he labored, and declared the Messiahship of Jesus. Persuaded the Jews and the Greeks-The fact that Greeks were found worshipping with the Jews indicates that they were in sympathy with them and might properly be called Jewish prose lytes. To these two classes Paul pre Timotheus were come—From Mace-donia whither they had been sont by Was pressed in the spirit-constrained by the word."-H Paul. V. Both of these renderings are sup ported by good authority. It is proba ble that Paul in his early ministry a Corinth was under great pressure; but when Silas and Timothy arrived. bringing with them good reports from churches in Macedonia, and joined him in his labors, he was greatly en-couraged and strengthened to testify "to the Jews that Jesus was Christ." 6. Opposed themselves-The word implies very strong opposition, as of a force drawn up in battle array. It was an organized opposition.—Cam. Bib. And blasphemed.—The Jews spoke wickedly of the truths that Paul uttered and profanely rejected them Shook his raiment—In token that he had spoken the truth to them that ocken the truth to them that needed, and he placed the rethey sponsibility for its acceptance upon them. Upon your own heads—The Jews must answer for the disposition they would make of the truth. I am clean—I have done my duty toward you. Unto the Gentiles—He would turn to the Gentiles in Corinth. In other places where he labored later he went to the synagogues and proclaimed the Gospel to the Jews. III. Ministry to the Gentiles (vs. 7-11.) ,7. Justus—"Titus Justus."—R. V. Justus was a worshipper of God. Paul made use of his house for the Christian services which he was conducting This would be a convenient place for any Jews to come who might become favorable to Christianity, and Gen-tiles would feel free to listen to Paul's preaching. 8. Crispus ... believed— The high position which Crispus occu-pied mode big comparison of the company of the com-side mode big company of the company of the com-side mode big company of the company of the com-side mode big company of the company o pied made his conversion ramarkable, and his course would naturally have great influence in leading others to accept the gospel; but it would be likely to make the unbelieving Jews still more hostile to the apostles. Many.... believed, and were baptiz-ed—The plain, positive preaching of the gospel had its designed effect. The results of Paui's labors were good-much better than at Athens. 9. By a vision-The Lord had spoken abother vision was given to him to in- of Gallio's, but in a very real sense spire him anew for his work. Be not his indifference was neither wise, loy-

prepare him for what awaited him. 10. I am with thee-God had given this assurance to Muses when he was about to undertake a great task. Jesus with them always. The promise was given to Paul that he might be strong and full of faith for his work. No man shall set on thee to hurt thee— The apostle would be assailed, but the

The apostle would be assalled, but the attacks of his enemies would do him no harm. I have much people—The Lord encouraged Paul that his labors were being greatly blessed, and many were believing in Jesus. 11. Continued there a year and six months-In this important centre the labors of the apostle were prolonged, and a strong church was founded. This is one of the few instances in which a definite period of time is stated in connection with Paul's labors!

IV. Paul before Gallio vs. 12-17) Achaia was a Roman province and Gallio was the pro-consul or governor. As he had been newly appointed, the Jews thought they could influence him to drive Paul away from Corinth. They charged Paul with teaching doctrines contrary to Jewish law, but Gallio would listen to no charges of a relig-ious character, as long as the govern-ment tolerated different religions, and the case was dismissed. The crowd who sympathized with Paul and who hated the Jews, took this occasion to do violence to Sosthenes, the chief ruler of the synagogue, and Gallie paid no attention to it.

V. close of Paul's second missionary journey (vs. 18-22). After laboring some time longer in Corinth, Pau went to Cenchrea, the eastern seapor of Corinth, and sailed for Caesarea stopping a short time at Ephesus on the way. He went up to Jerusalen and thence to Antioch in Syria, whenc he had started on his first two mis sionary journeys. The second mission ary journey occgupied about three years, and extended as far west a Corinth. Paul's mission had been em

inently successful. Questions.—Where is Corinth? De scribe the city. Who were Aquila and Priscilla? What discouragements came to Paul at this time? How was he What success did Paul nth? What did the Lard encouraged? have in Corinth? tell Paul in a vision? How long did he labor in Corinth? Where was Cenchrea? What points did Paul visit on his return?

PRACTICAL SURVEY.

- Topic.-A Battle for Truth.
- I. Under divine guidance.
- II. Under Roman protection.

1. Under divine guidance. In this lesson we may trace the divine pre-sence as manifested for the comfort of Paul, the divine providence in caring for his personal necessities and his safety while performing his mis-sion and the divine purpose in his stay at Corinth. Not one trial did stay at Corinth. Not one trial did Paul undergo which was not overrul-ed of God for his own glory and the highest good of his faithful apostle. The lesson opens with a beautiful pic-ture of human friendship, one which began in early relations and was per fected in the bonds of Christian fel-lowship, a friendship which was brought about by the remarkable guidance of Providence. Paul was asthat it would be impossible for anyone sisted and prepared for his work by to say that he was making gain out of the fellowship of Aquila and Priscilla The result of their coming together was of priceless value to each. Paul recognized the importance of estab lishing, as early as possible, a church in Corinth from which Christianity might radiate all along the lines of commerce. Because a place seemed unpromising for gospel work did not deter Paul from entering it. Paul was persevering. He used his opportuni-ties wisely even when he was hardest at work. He could not keep back the main point of his theme, certain as it was to awaken opposition. He pre-sented truths which compelled attention. When he was in Athens he saw all had been done which philisophy could accomplish, and the result was idolatry and profilgacy. Paul relied on the gospel alone as the only effect tual means of leading the sinner to abandon his sin and turn to God. He therefore determined to continue as he had begun, to preach Christ and him crucified to Jews and Greeks in therefore determined to Corinth. Paul believed that every-thing depended upon the acceptance or rejection of Jesus Christ. Opposition arose to the point of intense ridi-cule, literally, blasphemy. Paul found cute, interany, biaspienty. Faul found appeals to reason and conscience ut terly powerless with the Jews. Not-withstanding their intolerance and persecution Paul had no fear, yet the opposition of the synagogue led him to a more distinct ministry among the Cartilica. He had how here the the Gentiles. He had been loyal to the Jews. He separated the disciples from the synagogue in the hope of securing quietness and peace, but the prejudiced Jews continued their perse-cutions. It was at this period of perplexity that God's comforting mes-sage came to Paul. It was one of the sage came to Paul. It was one of the marked peculiarities of the divine dealing with Paul that at the great crisis of his life special visions were granted to him. If Paul was tempted to turn aside to a more quiet place to labor, he was thoroughly aroused by the vision and promise from God. His purpose was then deliberately formed He looked at things from his Mas-ter's point of view. This gracious and comforting manifestation of God to his servant came at a time of much depression. II. Under Roman protection. The opposition of the Jews grew into bet-red and finally into a murderous passion to compass Paul's imprisonment or death. A large number of Jews made common cause against one un befriended man in a religious matter. before a foreign court, with a very insincere statement of the case. The facts compare very closely with the treatment which the Jews gave to Christ. They thought they could ex-cite a tumult. Gallio would not even 9. By a vision—The Lord had spoken entertain the case. He ruled that re-to Paul near Damascus, and he became ligious differences did not come with changed into a new man. His nature in the authority of a civil magistrate. was new and the whole course of his He refused to listen to Faul's defense life was new. The Lord spoke to him in superfluous, for he had been guilty by a visit at Traos and a new field of of no offense against Roman law. In by a visit at Traos and a new field of of no ottense against tottan have labor was opened before him. Now a technical sense this was no concern of Gallio's but in a very real sense afraid—There was strong opposition to al nor manly. His decision was whol-him already, and efforts would seen be made to destroy his work. The Lord manifest to the Jews that they could gave him this token of his favor to not expect sympathy from him in any

attempt to interfere with Paul's preaching. Sosthenes was, doubtiess, the ringleader of the Jews, but the Greeks did no service to the gospel by their violence. Gallio's indifference may have been increased by seeing re-ligion identified with disorder, though the Greeks were not exceeding the custom of Corinth in their act. If this Sosthenes is the one referred to in First Corinthians, Paul's gospel tri-umphed in his conversion.—T. R. A.

BOUAHES FOR PROFIT.

When given the proper cultivation and fertilization, squashes can be profitably grown and yet not involve more labor than is necessary for other farm crops. The best soil is one of a rich sandy or gravelly nature, well fertilized with barnyard manure. It should be broken up early and well cultivated with disk or spring-tooth harrow, to pulverize well the top soil to a good depth, and the weed growth kept in check until planting time. Squashes do not require as good soil as do cucumhers and melons; other-wise the culture is practically the

Planting should be delayed until warm, settled weather, as squashes are all sensitive to cold. An acre of winter squashes will pro-vide much more nutritious and valu-

able food for stock than an acre of

corn. One ounce of seed will plant 24 to 40 hills, according to size of seed. It will require from four to six pounds of seed to plant an acre. Summer squashes grow mostly in

compact bush forms. The hills should be at least eight

feet apart in rows drawn eight fee distant. The rows are thrown out with a broad, heavy, single shovel plow drawn the long way of the plot and as deeply as possible. Where it is intended to have a hill, a good shovelful of well-composed barnyard manure should be dropped into the furrow, and, and a light harrow drawn length-wise, which will mix the ingredients with fine soil and forms a hill well fertilized, and which will stimulate rapid growth of the plant.

It is this rapid growth that combats such insects as the equash borer and beetle. Place at least a dozen seeds in each hill, so as to be sure of a good stand, and afterwards thin to at least three plants after the beetle season is passed, and more room demanded by the young plants for growth. Plant the seeds not more than an inch deep and distributed about the hill and covered with finely pulverized soil.

The weeds on the field must be kept down, which can be done by deep cul-tivation and by harrowing the centres between the rows. This must be kept up until the vines cover the surface. They should be cultivated deep and often, and the surface about the hills raked over well with the garden resc.

The last cultivation should be made after the vines have a good start. At that time a quantity of soil should be drawn with the hoe well up over the roots and stems of the plants. This materially prevents the destruction from borers which get in the root stem of the plants. Dust frequently with stove soot, air-slaked lime and plaster of paris, mixed, to prevent attacks of the beetle. This mixture should be lightly sprinkled on the plants in the morning when the dew is still on. The large gray squash bug must be picked

Additional fertilizer in the form of nitrogen is aftorded by applications of nitrate of soda, worked in for sev-eral inches adjacent to each hill during the summer cultivation. About one-third of a pound at each applica-tion may be used at the time of thin-ning, at the time the plants are budding, at the time the plants are bud-ding, and when small fruit is set-ting. This will give fuller matured specimens, dry and sweet, and with hard, thin shells indicating better keeping qualities.

It in At fficult to

greater. The sliage-fed cows saved 60 cents per month in the cost of feed.

A sore epot looks had for the owner of a horse, as well as for his driver. With proper care there need never be a sore on a horse.

The currant patch should be well cultivated and hoed, all weeds being kept down, as they are very injurious to currants. Keep well trimmed after they neve come into full bearing, as too much of the young and old wood will hinder the growth. It is not well to allow any of the wood to get sery old, as the finest fruit is usually grown on the two and three-year-old growths.

The orchard will require moisture and favorable cultivation for fruit of the marketable or even the kind for home use. Unless there is already a none use. Onless there is already a cover crop on the orchard soil it may be advisable to plant one for summer protection a little later on. There are many advantages that will appeal to those who give the matter the proper

INSECT MARVELS.

What the Hop Aphis Unchecked Would Do in One Year.

Few persons, writes James Buckland in a report of the Smithsonian institution, realize how enormous is the number of insect species or now amazing is their power of multiplication. The number of insect species is greater by far than that of the species of all other living creatures combined. More than 300.000 have been described, and prob ably twice that number remain to be examined. Virtually all living animals, as well as most plants, supply food for these incomputable hordes. The fecundity of certain insect forms is stounding. Riley once computed that the pro-

geny of the hop aphis, which sees thir-teen generations born to it in a single rear, would, if unchecked to the end of the twelfth generation. multiply to the inconceivable number of ten sextillions of individuals. Supplementing that calculation, Forbush says that if this brood were marshalled in line, ten to the inch, it would extend to a cint so sunk in the profundity of pace that light from the head of the rccession, travelling at the rate of 184,000 miles a second, would take

years to reach the earth. Kirkland has computed that in eight wars the progeny of one pair of gypsy moths could destroy all the folige in the United States. A Canadian ento mologist declares that in one season the descendants of a pair of potato brgs would, if unchecked, number 60,-000.000.

The voracity of insects is almost as astounding as their power of repdoluction. The daily ration in leaves of a caterpillar is equal to twice its two weight. If a horse were to eat as every twenty-four hours. Forbush says that a certain flesh-eating lavra will consume in twenty-four hours 200 times its original weight. A human child, to do well, would have to eat in the first day of its life 1,500 pounds of beef.

Trouvelot, who made a special study of the subject, affirms that the food takes by a single silkworm in fifty-six lays equals 86.000 times its original veight at hatching. What destruction dave this one insect would cause if even a cne-hundreth part of its eggs ever the value to man of the insect-eating

For we have not a high priest witch cannot be touched with the feeling of our infimities; but was in all points tempted like as we are, yet without sin. Let us there fore come boldly unto the throne of

grace. The beloved of the Lord shall dwell in safety by Him; and the Lord shall dwen cover him all the day long, and he shall dwell between His shoulders

VOID.

"The earth was without form and void. (Gen 1, 3;) The word void is strong and full of meaning; it will not be taken out of our dictionary for some time. It means widowed, de prived of, empty, vacant, not occu-pied. "I looked out of my window," says Wildom. "I discovered among the youth a young man void of under standing." We have some of these in standing." We have some of these in the city, and some what cannot be call ed young. Many of these go to church on Sunday. Look at these men as they enter the senctuary in the freshness of the morning; there's a drag, a dul ness; the healthy glow of a ma alive is wanting, there's a void-

"Christianity, wherever it has not penetrated the life, has made a great void around it, and the man who in the bosom of Christendom is, nevertheless, not Christian, carries about a desert within him. The perspective is luminous for some, gloomy for others where reigns not an ineffective joy reigns an ineffable sadness."

We hold it essential to the very no tion of religion that it should be able to furnish proofs capable of satisfying an earnest and attentive mind. Love opens the mind to thoughts so high o new, that they must seem madnes to such as do not accept them.

, Have we not a numerous class who have long been hovering around Christianity as around an impenetra ble sanctuary; they knock at all doors without seeing it open; at once believ ing and not belleving. Christian in desire, Pagan in hopes, convinced, but not persuaded, enlightened and not consoled. Could we plead with this numerous class we might say, "How comes it that you believe. and that as yet you have only the expenses and not the revenue of your faith; how comes it that you wear your faith as a yoke that burdens and cramps you, not as wings that raise you above the world and its sorrows? How comes it

that in the midst of this religion, ac

cepted by you, believed in, you are strangers, aliens, and as it were out

comes it that you are not "at home" in your Father's house? Let us lay

our finger upon the wound. It is be-cause your heart is not yet touched." Walk the deck of a ship with no

cargo on board and the sound is hol

bug. He is a quick fellow, evidently on constant watch. Hand-picking is the most satisfactory method, al-though kerosene emulsion, soap emulsion and tobacco decoction are recommended mixtures.

Many bugs can be destroyed by laying pieces of boards on the ground among the vines with one end slightly raised. The pests will cluster under these boards for shelter and protection, and can be collected and de-stroyed a couple of times each day, thus greatly reducing their number.

FARM NEWS AND VIEWS.

It has been determined that salt is a valuable seasoning for the feed of hogs, though only a limited amount is required. It acts as a stimulator of the appetite and appears to improve the taste of the animal, just the same as it does a human being. It aids in digestion and in general increases the every of the vital process and is greatly relished. When charred cobs are fed to pigs they appreciate them much more when they are sprinkled with salt. If you feed a slop ration it should have a little seasoning of salt in it. The effects of a mild seasoning of salt in the food are beneficial as a tonic and general aid to good condition. However, be careful not to overdo it.

Some cows should go dry longer than others, but every cow will need a season of rest of at least a month or six weeks. It will be better for her and her unborn calf.

An experiment conducted at the Kansas Experiment Station shows that silage reduces the cost of producing butter fat from 30 cents to 21 cents. The herds in this case were of suffi-cient size to give reliable data and eliminate the difference that might occur between two cows. The lot which were fed sllage gave seven ounds more milk in the summer and 95.5 more in winter per month than the herd which were fed dry feed. The the herd which were fed dry feed. The in his speech, hasn't he? Wagg-butter fat was also increased by .46 Yes, but that doesn't prevent him in summer and 46 in winter. The dif- from putting in a good word for him-ference in the cost of feed was even self.

No and

The most unusual black satin cape shown here is dubbed "The Dragoon" because of the richly embroidered because of the richly embro monster on the brilliant satin.

Armenia's Lost Name

"Dolan was a ginerous man, too, said Michael. "" "Ginerous, did tye say? Well, I don't know so much about that. Did Dolan ever buy you anything?" """[1] nearty" said Malachi. There is no such country as Ar-menia. Officially the Turks decline to mena, Officially the Tarks decline to recognize the name, and maps mark-ing "Armenistan" have regularly been confiscated. Unofficially again nobody can say exactly where "Armenia," or Kurdistan, as it is alternatively called, day he came into Casey's barroom where me and me friends was drink-in', and he said to us: 'Well, men, begins and leaves off. Nor is there pro perly such a people as the "Armen what are we going to have-rain or begins and leaves off. Nor is there pro-perly such a people as the "Armen-ians." That is only a name given them by foreigners. They call themselves Haik and their country Haiasdan, tracing their descent from Haik, grandson of Japhet, whose dynasty was overthrown by Alexander of Mace-den - London Sneetator snow?

Kingeto Standard) (Kingeto Standard) Why do not the banks have the war tax stamps embossed on their cheques and charge their customers for them? It world save-much trouble in many ways, and incicentally would save money for the banks, as such a thing as using the unstamped cheques, so liberally supplied, as writing paper and "scribblers," is not unknown. don.-London Spectator. Wigg-Bighedde has an impediment

Some people are so susceptible to fatigue that they can't even reach a conclusion without getting tired.

Waterproofing Matches.

A waterproof matchbox is good for emergencies, but not for a smokers daily supply. I waterproof the matches themselves by dipping them half length in shellac varialsh thinned with alcohol and laying them out separately on a newspaper to dry. Shellac is better than parafin or collodion because it does not wear off, and it is itself in-flammable, like sealing wax. Matches so treated can be left in water a long time without spoiling,-Outing.

Maple Custard.

Beat five eggs; stir into them one cupful of maple sugar, one tablespon-ful of flour, one-half teaspoonful of salt, one-quarter teaspoonful of nut-meg. Stir all this into two quarts of lukewarm milk. Pour in baking dish; bake in a moderate oven until custard is set—that is, firm in the centre. This recipe makes a great deal of custard, but one can always cut down the am-ount of ingredients if desired.
