

Heals Inflamed Nostrils Stops Catarrhal Discharge Relieves Colds Quickly

You'll be pleasantly surprised at the quick action Catarrhozone has upon Catarrhal conditions in the nose and throat. It is so soothing, so healing, so agreeable to use, so safe and reliable that thousands praise it and use it everyday. No nasty medicine to take—you just breathe in the balsamic vapor of the healing essence of Catarrhozone and feel better at once. Catarrhozone is breathed through the inhaler into every air cell in the lungs, into every air passage in the throat and nostrils. No matter where the cold or catarrh is, Catarrhozone will reach it. You can keep free from coughs, colds, bronchitis and the like by using Catarrhozone. Two months' treatment One Dollar, small size, 50c. Dealers everywhere, or the Catarrhozone Co., Montreal.

Cheap Land In Western Canada

Magnet Expected to Attract Many Settlers From the U.S.

Western Canadian land with its profitable opportunity in successful farming ought to be a magnet of unquestionable drawing power where American agriculturists are concerned. The latter are in touch with the object lesson of Illinois and Iowa land selling at from \$100 to \$300 an acre while land of equal fertility can be purchased in Western Canada at from \$20 to \$40 an acre. The American who has been living on the land has a wonderful advantage as he has had good farming experience and can come to Canada ready to take off a crop the first year. Dealing with the comparatively low prices of land in Western Canada the Toronto Mail and Empire says:

"The publicity commissioner of the department of immigration reports that this year an extraordinary influx of settlers of a good class is expected in the west. In the states south of the boundary, high agricultural land values have led to a general raising of rentals. There as much rental is being asked per acre as equally good Canadian land can be bought outright for. From Britain also is coming a high-class of settler with capital.

"In the last year or two record prices have been obtained for improved farms in Iowa and other agricultural states. As high as \$300 an acre has been paid for farm land, and \$100 has been an ordinary price. Land of just as good productive quality is available for \$20 or \$30 in the west, and the Canadian farm average is not more than \$50. On say two hundred acres the difference in capital valuation would be from \$10,000 to \$20,000 as between Iowa and Saskatchewan. At seven per cent. this is an advantage of from \$700 to \$1,400 a year in favor of the Western Canadian farmer. Since the United States market is still open to Canadian wheat, cattle, etc., and the Canadian seller gets the benefit of the exchange, the Western Canadian producer has only a longer rail haul as an extra marketing expense if he ships to Chicago. His costs of marketing are not greater than the American farmer's, as a whole, because Canadian railway rates are still a shade lower than American, and the Liverpool price keeps a fair equilibrium between Chicago and Winnipeg grain values. If the Canadian farmer's land has only one-half of the investment, or even less, because some of it may have been homesteaded, it is hard to believe that, as a producer, he has no better profit possibilities than his American competitor on high priced land. What handicaps British agriculture is the high price of land and heavy taxes on it. The British farmer holds his own only because he gets thirty bushels to the acre, against a Canadian average of perhaps fourteen or fifteen."

Japan Will Agree To Naval Holiday

Kato Says Present Programme Is Not Irreducible.

Assertions that the Japanese naval programme is being followed for the purpose of competing with the United States navy were denounced as "preposterous and absurd," by Vice-Admiral Tomosaburo Kato, Japanese minister of marine, in an interview with the Associated Press. He declared Japan was not trying to compete with the United States navy, and that the Japanese naval programme had been formulated so that the island empire could be defended against any emergencies arising in the Far East alone.

During the course of the interview the minister emphasized the fact that Japan's project to have a fleet of eight battleships and eight battle cruisers, not over eight years old, was not necessarily irreducible. He indicated that if all the naval powers would agree to a "naval holiday," he would be willing to enter into such an agreement, and would not insist upon the completion of the naval programme projected by the government.

Defence of Farmers

Charge of Profiteering Attributed to Ignorance of Facts.

"With unprecedented food prices and little public knowledge of farm finance, it is not surprising that the defenceless farmer should be classed as a profiteer," said Prof. Barton, of MacDonald Agricultural College, addressing the St. James Literary Society in Montreal.

"The city man, by his ignorance, talks glibly of farm wealth manifestations and huris indictments at this narrow, selfish and ignorant, greedy monster who robs the poor man's child of its milk that he may drive an automobile."

Prof. Barton said the automobile was common on the farm because it had come to be necessary to the business and was only incidentally used for pleasure; and the automobiles very generally were possessed with a mortgage attached.

World's Greatest Secret

Lord Headley Tells Of Latent Power Not Yet Discovered.

The hidden power of "electronic energy—the world's greatest and most terrible secret"—as he described it, was dealt with by Lord Headley, in his presidential address to the Society of Engineers at Burlington House, Piccadilly.

This power, he said, had been described as so great and terrible that it had been seriously put forward that scientific research in this direction should be stopped until it was felt that the human race was sufficiently elevated to be entrusted with the keys of such fearsome store-houses of power. Lord Headley declared that it might well be argued that in the future when the dogs of war, in the shape of harnessed electrons, were let loose, not a single human being would survive on the battlefield. A general officer sitting at his comfortable desk in the war office might touch a button and release destructive agencies capable of sweeping hundreds of square miles, and depriving of existence every living creature thereon.

It was said Sir Oliver Lodge and Lord Headley had calculated that there was enough energy in every ounce of electron to lift the whole British fleet from the surface of the sea to the top of Mount Everest, enough latent force in one's little finger to run all the trains in the United Kingdom for several minutes, and sufficient atomic energy in an ounce of matter, if properly controlled to keep the largest liner in the world going at full speed for a week.

Fish Catch Smaller

February Figures Show Decrease But Value is Higher.

The total catch of sea fish on both coasts of the Dominion for the month of February, was 166,751 cwt., with a value in first hands of \$691,030, as compared with 278,398 cwt., valued at \$652,970 for the same month last year. The greater value of the smaller catch this year, according to the monthly statement of the fisheries branch, is due to increased catches of halibut and smelts, which are fairly expensive fish, while the catch of herring, a cheap fish, was much smaller.

During the past year Sam J. Barnett, a justice of the peace of Dallas, Texas, added \$2,500 to his income by marrying 851 couples.

A woman's vanity begins with her hat and ends with her shoes.

Healthy Liver Healthy Life

Your liver—healthy or clogged, active or sluggish—makes all the difference between a vigorous, cheerful life and low spirits and failure. To subdue a stubborn liver, overcome constipation, dizziness, biliousness, indigestion, headache and the blues there is nothing on earth so good as Carter's Little Liver Pills. Purely vegetable.

Small Pill—Small Dose—Small Price

Smut Treatment for Oats

Method Devised for Treating Oats Without Necessity of Drying Them.

A method for treating oats for smut without entailing the necessity of drying them has been devised. In using this method one part of formaldehyde is added to ten parts of water and applied to the oats by means of a common quart sprayer. Spread the grain out on a clean floor, canvas or wagon box. As the grain is shovelled from one pile to another, each shovelful is sprayed with the sprayer held close to the grain. Use the solution in the proportion of one quart of the solution to five bushels of grain. Cover the grain with sacks or canvas which have been sprayed thoroughly, and leave covered for four hours. By using this small amount of the solution the seed is not wet, does not swell, and may be treated any time before planting. This method is recommended by the authorities in Idaho.

A similar method has been used with success by the Central Experimental Farm, which recommends it for oats, barley and wheat. The Idaho authorities, however, do not recommend it for any grain but oats.

Alberta Cattle for England

Being Shipped With the Object of Experimenting for Establishment of a Regular Market.

A number of live cattle, grain fed over the winter months, are being shipped to England by Alberta stockmen with the object of experimenting conditions for the establishment of a regular market. It is stated that Scotch and English beefs are selling at a large increase over the price paid in Canadian and United States markets, whilst the fact that the purchase price would be paid in English currency gives an added advantage owing to its discount in Canada.

Why There Is Crime

Records Show That in Canada Crime Is Increasing.

Judge Kelly, in opening the spring assizes at Woodstock, Ont., made some remarks on crime and criminals, that are worthy of attention. The records show that in Canada crime is increasing, the graver kinds as well as the lesser. There has been much meaningless comment on the situation, society, the foreigner, the war, and other real or imaginary conditions being blamed. Judge Kelly says the extra amount of crime is being committed, not by foreigners "but by men of our own extraction," born and brought up in this country. He seemed to think parents were in part responsible for the unsatisfactory state of affairs, home authority being allowed to fall into disregard. The state's duty is thus made harder, but it is duty. The proper and quick punishment of crime will help to bring a better order.—Montreal Gazette.

When a girl invites a young man to her home for dinner and he is told that she did the cooking, it's time for him to sit up and take notice, or beat a hasty retreat.

It is rough on a man when love or measles attacks him late in life.

Sunflowers Increase Profits of Dairies

Reports Tend to Indicate that New Fodder Destined to Become a Standard Crop.

Now that winter feeding of stock is almost finished, reports on the results of sunflower feed are coming in from many sources, and all tend to indicate that this new fodder is destined to become a standard crop in the western provinces. It seems that practically everybody who has experimented with a few acres of sunflowers is going to at least double the acreage this year and silos will be springing up in every district throughout the west.

A typical example of what this silage means to the dairy farmer is given by Bert Tiffin, of Lethbridge, Alberta. For the purpose of comparison it may be mentioned that in December, January and February, 1919, his cows produced milk to the value of \$1,128.93.

Last year Mr. Tiffin planted five acres to sunflowers and from the same number of cows he got milk that brought him \$1,648.04, an increase of \$519.11. His silo cost less than \$500. Previously he needed all his quarter section to supply feed to his herd but his sunflower yield was so large that he has been able to spare fifty tons of alfalfa, worth about \$700, for the market, so that even with the expenses of his silo he will have a net cash surplus of more than \$700. Adding in the value of his silo he has found that the sunflower fodder has meant more than \$1,200 increased revenue to him.

W. P. Huff, a sunflower enthusiast who is in the dairy business fairly extensively near Edmonton, recently had an opportunity of testing the feeding value of sunflower ensilage over green feed and hay for dairy cattle. Last fall he put up somewhat over two hundred tons of sunflowers, but this was all fed up before the first of the year. Some of the ensilage round the walls of the silo froze, and as it was more or less difficult to get it out it was left until the weather would be warmer.

Later the weather became mild and caused the ensilage that was frozen to the walls to thaw out and fall to the floor of the silo. There was enough ensilage to feed the herd of over seventy head of cows for a week. During that period the milk flow was noticed to increase per cow per day from two to two and a half pounds, which for the seventy cows amounted to a considerable gain.

Platinum Deposits

Production of Platinum to Develop Into an Important Industry in British Columbia.

The production of platinum is to develop into an important industry in British Columbia, investigations conducted over a number of years having disclosed that the Fraser River and adjacent territory constitute one of the principal platinum deposits of the world. A plant is being erected and it is expected reduction work will commence in the spring. It is believed that for 250 miles along the Fraser and 150 miles on tributary streams 75 per cent. of the black sand deposits can be dredged and concentrates to the extent of from 8 to 40 pounds per cubic yard of dirt obtained.

The most powerful artificial light in the world is that of the lighthouse on Heligoland, which is of 40,000,000 candle-power.

Children Cry for Fletcher's

CASTORIA

Fletcher's Castoria is strictly a remedy for Infants and Children. Foods are specially prepared for babies. A baby's medicine is even more essential for Baby. Remedies primarily prepared for grown-ups are not interchangeable. It was the need of a remedy for the common ailments of Infants and Children that brought Castoria before the public after years of research, and no claim has been made for it that its use for over 30 years has not proven.

What is CASTORIA?

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opium, Morphine nor other narcotic substance. Its age is its guarantee. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic and Diarrhoea; allaying Feverishness arising therefrom, and by regulating the Stomach and Bowels, aids the assimilation of Food; giving healthy and natural sleep. The Children's Comfort—The Mother's Friend.
