

The company's future plans are to continue its current high technology strategy but with stronger emphasis in the areas of particle sizing, counting and identification. The company expects to make its entire range of manufactured products available for sales world-wide.

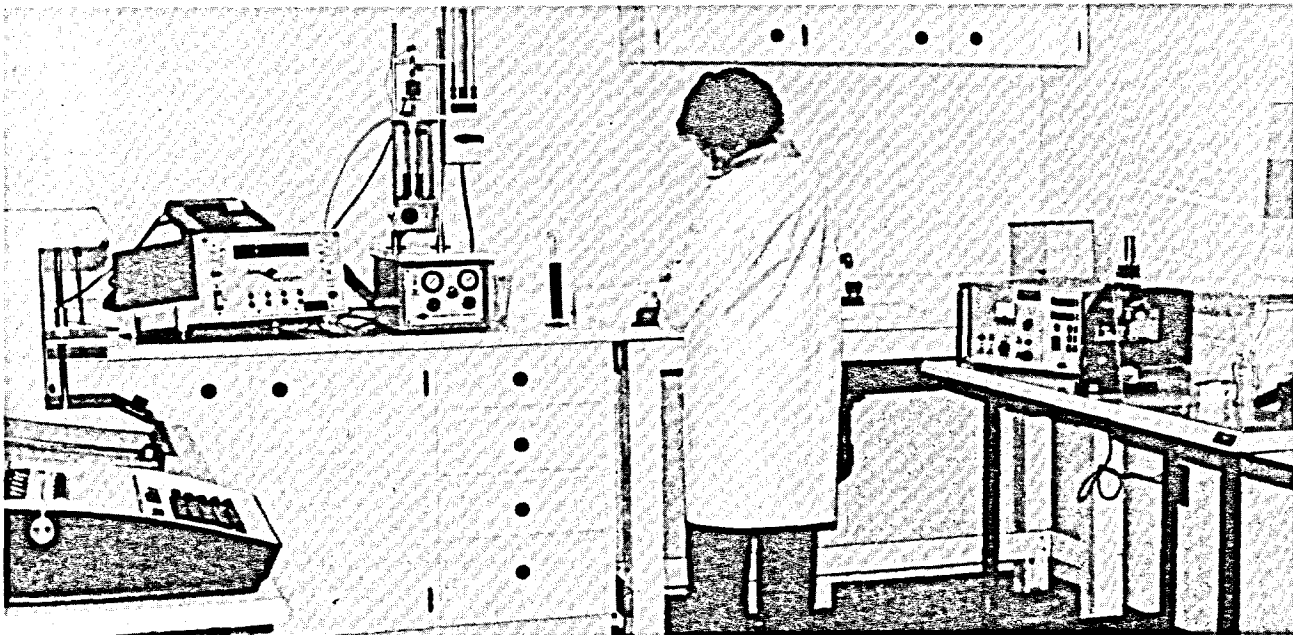

MONO RESEARCH has also entered into negotiations to manufacture under license products abroad which will be manufactured in Canada for sales throughout North America. It is expected that the company's skills and experience will enable this segment of its activities to show particularly strong growth.

*A particle detection system manufactured in the Development Laboratory for a customer's unique application.*

*An Automated Eating Aid. One of a number of products developed, manufactured and marketed for the handicapped.*

*The Service Laboratory, dedicated to sample preparation, particle sizing and counting.*
