

## READY-TO-WEAR COMPANY

## A Tailor's Fit at Half His Price

You didn't have to wait until we came to town to find out that you could buy clothing all ready to put on your back to fit as well and look as well as though you were measured for them—but you did have to wait for us to really learn for how little money you can have a tailor's fit—with all the character and individuality in the garments you could demand of any custom tailor—and here are four or five chances to show your appreciation of value for to-morrow:

## MEN'S TOPPERS

Stylishly-made Toppers, of a nice shade of covert cloth, sizes 34 to 42—not many in the lot—regular \$15.00 lines, to clear at ..... **9.40**

## MEN'S CHESTERFIELDS

Light and Dark Oxfords, in elegantly tailored garments, specially tailored and trimmed, perfect fitting; regular \$16.00, for ..... **11.90**

## MEN'S SUITS

Nice, Dressy Tweed Suits, in the single and double breasted saque styles, exclusive patterns, sizes 32 to 44; regular \$13.50 values, for ..... **9.85**

Men's Fine Fancy Tweed Suits, high-class in every detail of the making, S.B. and D.B. styles; very fashionable cut; \$20.00 values for ..... **15.95**

We ought to do the furnishing trade of the city with the "natty stuff" we are showing to-day

"Banner" Shoes—3.50

The "King" Hat—2.50

Store Open Saturday Night.

"READY-TO-WEAR" COMPANY  
191 Yonge Street

## ANOTHER MINE FATALITY.

Three Men Killed This Time and Six Injured.

JOHNSTOWN, Pa., May 3.—Three men were killed and six others injured, three fatally, yesterday, in an accident in an ore mine at Riddiessburg, Bedford County. The men were all foreigners. A shifting crew placed a car on which the men had been unloading ore, on a trestle, while other cars were being placed. When the engine backed to the main

## PILES

Dr. Chase's Ointment is a certain and guaranteed cure for hemorrhoids, itching, bleeding and protruding piles. See testimonials in the press and ask your neighbors about it. You can use it and get your money back if not satisfied. Go, at all dealers or EDWARDS, BATES & CO., Toronto.

DR. CHASE'S OINTMENT.

## To Fight Dredging Trust.

CLEVELAND, May 3.—Louis P. Smith of the L. P. & J. A. Smith Co., great lakes dredgers, filed suit in common pleas here to-day asking for the dissolution of a dredging trust, which he says exists.

He declares that the Great Lakes Dredge & Dock Co., which took over the L. P. & J. A. Smith Co. of this city, and the Lorain Dredge Company, are in an agreement which is contrary to the Valentine anti-trust law.

## Run Down by Bicycleist.

Nine-year-old Gladys Foote, the little daughter of Henry Foote, 267 Sunnyside street, was knocked down by a bicycleist at Queen and Rockville streets. The man rode on. All of the girl's front teeth were loosened, and Dr. Sweeney found it necessary to put three stitches in her lip.

## APPROVE POSTAL RATES BUT PRESSMEN ASK TIME

Resolve That Regulation Be Not Effective Till Next Year—Uniform Wrappers.

The revision of the postal relations between Canada and the United States, with respect especially to newspapers and periodicals, was discussed by the executive of the Canadian Press Association at meeting held yesterday in the Rossin House.

The efforts of Hon. Rodolphe Lemieux, postmaster-general, for the betterment of the Canadian publishers' position, were acknowledged, but while appreciating what had been done on their behalf the members of the committee were averse to having the revision sprung on them too suddenly, and the request will be forwarded to the postoffice department that the new code of relations be postponed till the beginning of next year.

The sentiment of the meeting, and incidentally of the majority, if not of all, the members of the association, was crystallized in a resolution, which was unanimously adopted.

In this they placed themselves on record as being in accord with Hon. Mr. Lemieux, with respect to his adjustment of postal interchange upon an equitable basis, but inasmuch as the immediate application of the new postal rate upon short notice, and in the middle of a subscription year, had entailed much inconvenience and loss, they suggested:

(1) That the postmaster-general be strongly urged to make every possible effort to secure a postponement of the date for the coming into force of the new order until Jan. 1, 1908.

(2) That the postoffice department should furnish publishers with stamped wrappers of a size suitable for their mailing purposes at the cost of the stamps.

(3) That the domestic rate on newspapers be revised and made more favorable to the publishers.

These requests were resolved in conclusion, should be pressed upon the postmaster-general, Mr. Lemieux, by a delegation consisting of J. T. Clark, president; H. B. Dalby, J. F. MacKay and C. W. Young.

It was also decided at the meeting that a souvenir booklet of the entire press of Canada, should be issued at the time of the next annual convention of the association in commemoration of the fiftieth anniversary of the organization, which occurs next year.

## THE POWER QUESTION

Continued From Page 1.

power and the territory to be served are among the points not yet definitely settled.

It is probable that some of the other companies will avail themselves of the opportunity thus afforded of supplying part of the power which may be required.

Penalties are provided for in case of non-compliance with the terms and conditions of the contract are based on a tender submitted to the companies by the commission at the time ago, when a request was made for the submission of the figures. The offer of the Ontario Power Co. was the most favorable.

The Ontario Power Co. has authority to generate 180,000 h.p. at Niagara and may export one-third of this amount, leaving 120,000 h.p. to dispose of in Ontario. They have five generators already installed, producing 55,000 h.p.

## May Make Contract.

It is of importance to the municipalities concerned to know that they can now at any time enter into a provisional contract with the hydro-electric power commission. It is not necessary for them to wait until a bylaw is submitted to the ratepayers. Such action will greatly facilitate the work of the commission, and the provisional contract may afterwards be ratified.

The formal contract which has thus far been awaiting the result of the negotiations will be sent out to the municipalities as soon as they are concluded, as anticipated, in the course of a few days.

## Fourteen Want Power.

Already 14 municipalities have applied for power as follows:

Toronto	15,000
Toronto Junction	4,000
London	5,000
Guelph	2,000
Galt	1,200
Woodstock	1,200
Ingersoll	1,200
Stratford	1,200
St. Mary's	750
Preston	500
Berlin	1,000
Waterloo	700
Hespeler	700
Brimford	2,500

In addition to these St. Thomas and Paris have applications pending.

## Delivery the Next Point.

The next point to be settled is the delivery of the power to the city. The government has made good, and more than made good, in all that it has undertaken so far in connection with the hydro-electric power commission. It is highly improbable that at the present advanced stage of the proceedings, anything will be permitted to disappoint the needs and the interests of the people. To convey power from Niagara to the municipalities a transmission line must be built. The existing line is no more than will carry present requirements. If a new one is to be constructed the inference is that the hydro-electric commission will be compelled by the nature of the situation to build its own line.

The possession of a right-of-way on existing railway tracks simplifies the problem to an amazing degree, and the actual work is easy.

Toronto householders may begin to look forward to an era of cheap electric service. A new German lamp, using one watt per candle, has cut the present electric lighting efficiency in three, and will easily knock out gas at the rate of six cents per candle.

Every month produces new devices in lighting, cooking, heating and other economical applications of electricity. Electric irons are extensively used. A neckwear house on Front-street has a very large installation. Other small goods are treated by electricity to a large extent. The heat can be directly applied, and more efficiently in these instances. Decorative lighting and advertising devices are extending rapidly.

## What Buffalo Does.

On a larger scale Buffalo furnishes an example of competition with steam power in pumping. A 25,000,000 gallon electric pump costs \$35,000 to install. Three triple-expansion steam pumps of 25,000,000 gallons each cost \$125,000 to install. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping costs \$5.40 per 1,000,000 gallons, with 200 feet head. The steam pumping costs \$4.50 per 1,000,000 gallons with 150 feet head. At the same head this would be equivalent to \$6, or 60 cents, for electricity. With coal at \$2 a ton, and electric power at \$1 a horsepower, the electric pumping
