Beaver Board is a wood fibre wall board that can be used instead of lath and plaster. It is wood in fibrous form, pressed into panels about 3-15 inch thick. Its pitted surface permits soft color effects and allows a variety of original and artistic methods of decoration. In new rooms beaver board is nailed to the studs and headers of walls and ceiling, the intersections between the panels being covered with decorative strip of wood.

Beaver board can be used in homes, stores, offices, public buildings, factories, and makes a splendid background for window displays or for concert scenery. Obtainable in sheets 32 and 48 inches wide and 6, 7, 8, 9 and 10 feet long.
