

General Intelligence.

Domestic.

As the Rejoinder treaty which has now passed the House of Representatives in the United States requires that the ratification be complete within six months from the 5th of June last, it is presumed that extra sessions of the Colonial Legislatures will be rendered necessary.

THE RAILROAD.—The Railroad Iron is on its way to this port. The Cars are to be American, on locomotive is in course of construction in the States; also two others at Glasgow.—Journal.

It is said about twenty of the German passengers have gone to work on the Railroad.—Id.

The work on the Canal, Dartmouth, is not progressing with any rapidity. A much larger number of men will be required.—Id.

THE WEATHER.—The storm which occurred on last Sunday morning, was so very violent, caused considerable damage; yet, not so great an extent as was first feared. In town, two cows were killed. Three of Mr. West's family were stunned and completely paralyzed for a short time.—Liverpool Transcript.

THUNDER STORM AT PORT MEDWAY.—A dreadful thunder storm passed over this place on the 30th. The house of Mr. William Cahoon was struck by lightning. The electric fluid entered the chimney at the top of the house, bursting in several places, and throwing the bricks and furniture in every direction, causing considerable damage. Mr. C. was sitting near the chimney at the time, but received no other injury than being stunned, (as also other inmates of the premises) by the shock.—Sun.

PICTON, AUG. 3.—The Weather and the Crops.—Haying is now generally commenced throughout this County, and in some districts very well advanced. The weather has been very favourable until this week. Since Saturday last however several small showers have fallen, which have retarded the progress at hay making but proved of immense benefit to wheat and other crops, which all now promise to yield fair returns. The hay crop is light, and throughout the County of Pictou generally is below an average. In the Counties of Sydney, Guysboro, Richmond and Cape Breton the crops generally have a promising appearance.—Eastern Chronicle.

Immense quantities of Mackeral have within the past few weeks swarmed the shores of Cape Breton. In Archard harbour work boats last about two thousand barrels were hauled, and twenty thousand barrels might have been taken with ease, had there been salt to cure them. Large quantities were also taken at St. Peter's, and other places along the coast. These mackerals are small, being about the size of summer herring, but are very fat, and are considered more valuable than the large No. 3 spring fish.—Id.

KING'S COLLEGE.—We are glad to be able to announce that the Rev. G. W. Hill has accepted the appointment of Professor of Sacred Theology, of King's College, Windsor.—Church Times.

ADMIRAL SHIP.—It is said that the Bonaventure, 74, has been detached from the Baltic fleet to proceed to Halifax, to the Flag Ship of Rear Admiral Fawcett, Commander-in-Chief on the North American and West India station.

New Brunswick.—The steamer Atlantic last week, on her passage from Boston to this port. She struck a large rock three miles west of Quobly light, in a dense fog, and began to sink rapidly. She was run on shore, when her passengers and crew, three hundred in number, were taken off safely in boats, with their luggage and all the cargo. The vessel has since become a total wreck.—Church Witness.

The Morning News states that in consequence of the difficulty in procuring hands on board of the Fredericton steamers, the trips of these boats are all but discontinued.—Id.

Re-opening of the Methodist Church, St. Stephen.—On Sunday, July 28th this House of Worship was re-opened, after being closed for several months in consequence of undergoing alterations and repairs. The Rev. Mr. Clark, of Fredericton, attended, and conducted the forenoon and evening services. Both services were attended by numerous congregations, of the size of the morning especially, when the church was so densely crowded that some had to return for want of seats.—The talented preacher chose for his text in the morning, Hagai 2d ch. 9th, v. and in the evening, 2d Corinth. 13th, v. and in each service, was fully delivered with impressive earnestness, and was listened to by those present, with corresponding attention and seriousness. Collections were taken at the close of each service, in aid of the expense incurred by the repairs and re-modeling; and from the well known liberality of the people of St. Stephen on such occasions we feel inclined to believe that the contributions were satisfactory. The services of the morning were solemnized in the clove of the morning services, and the reopening of the Wesleyan church will, we think, be a day long and fully remembered by many, when the joyful and full pleasure-services of the world are forgotten.—St. Stephen's Patriot.

P. E. Island.—RESIGNATION OF THE EXECUTIVE COUNCIL AND PUBLIC OFFICERS.—We understand that the Members of the Executive Council thought fit some time since to place the resignation of their seats at the Board, in the hands of His Excellency the Lieutenant Governor, to be by him disposed of when he should see fit; and on Wednesday last His Excellency notified these gentlemen that he had been pleased to accept of their resignations. On Thursday morning, as soon as this intelligence became known, the Public Officers also tendered the resignation of their offices.—Halifax Gazette.

RECENT APPOINTMENTS.—The Hon. George Cole, Charles Young, William Swaby, James Warburton, William Warren, Lord Joseph Henry, Edward Curtis Haythorne, and Joseph Wright, Esq., to be members of the Executive Council.—Halifax.

Hon. George Cole Colonial Secretary and Lord Correspondent. Hon. Joseph Henry Attorney General. Hon. James Warburton Colonial Treasurer. Hon. William Warren Registrar of Deeds and Keeper of Plans. Hon. Edward Curtis Haythorne, and Joseph Wright, Esq., to be members of the Executive Council.—Halifax.

Hon. George Cole Colonial Secretary and Lord Correspondent. Hon. Joseph Henry Attorney General. Hon. James Warburton Colonial Treasurer. Hon. William Warren Registrar of Deeds and Keeper of Plans. Hon. Edward Curtis Haythorne, and Joseph Wright, Esq., to be members of the Executive Council.—Halifax.

Hon. George Cole Colonial Secretary and Lord Correspondent. Hon. Joseph Henry Attorney General. Hon. James Warburton Colonial Treasurer. Hon. William Warren Registrar of Deeds and Keeper of Plans. Hon. Edward Curtis Haythorne, and Joseph Wright, Esq., to be members of the Executive Council.—Halifax.

Hon. Edward Curtis Haythorne, and Joseph Wright, Esq., to be members of the Executive Council.—Halifax.

are sorry to be obliged to add that the deceased has left a widow and six children.—Halifax Gazette.

Canada.—THE ELECTION.—At the latest advice the majority of the returns were in favour of the Administration—twenty for and eighteen against.

GREAT CONFLAGRATION.—Just as we are going to press (3 P.M.) a terrible conflagration is taking place in the woods above Lachine. —Montreal Pilot, 26th July.

MAN KILLED BY LIGHTNING.—During the thunder storm, last Saturday evening a man named Darg, living on the South Shore, nearly opposite the town, was struck by lightning while engaged in prayer near an open window, and he was instantly killed. The lightning ran along the wall and into the cellar, doing a great deal of damage.—Three Rivers Inquirer.

POTATOES ASSAILED.—The Hamilton Spectator, July 1, says:—We regret to notice that, in this neighbourhood, the potato plant has been attacked by a new enemy, that threatens to be almost as destructive as the rot. This new assailant is a sort of caterpillar that, in a night or two, eats up the whole of the leaves, leaving the stems quite naked.

THE MORTALITY IN LONDON AND NEW YORK.—In London, with a population of two and a half million, the total number of deaths for the week ending July 15 was 1299, of which 72 died of scarlet fever, 10 of small pox, typhus fever, 47 of looping cough, 35, and one of hydrophobia. In New York, with a population at the outside of 750,000 not one third of that of London, the deaths last week were 915 or within 235 of those of London. The West Indies contain the healthiest city of the two, as mortality in London on the week ending the 15th, was considerably above the average, while in 1843 was 390. Boston in population is about one fifth as large as London, and the mortality in Boston last week was not much greater comparatively than in London.

The huge electric cable for the Mediterranean submarine telegraph measures 120 miles in length, comprising six conducting copper wires, each coated with asbestos, impervious to wet, and again covered with lead. The whole is protected by galvanised iron wires of immense strength, the entire mass weighing nearly 1900 tons. The cable will run out to Cape Corica, in Corsica, a distance of 110 miles, the remaining 10 miles being allowed for the depth it has to traverse. Lead electric wires are being laid down the entire breadth of Corsica to the straits of Bonifacio, and a second cable, 150 miles long, is in the course of construction, to be submerged across the straits to reach the shores of Sicily. From there on the opposite point of the island a third cable is to be laid down to the coast of Africa.

Recently a great rain storm, lasting twenty-four hours, occurred in Vera Cruz, causing great damage to the railways, bridges and bankments, and rendering a suspension of travel on the road necessary. The town of Amatlan has been nearly destroyed by fire, and Flacoaplan is suffering the privation of famine in consequence of the failure of the crops. In several departments locusts have been ravaging the plantations, causing great destruction, so that the States of Oaxaca and Chiapas, are threatened with famine in consequence of this and also a long continued drought. Great numbers of cattle in Chiapas died from the latter cause, and their putrefying carcasses tainted the air so that the inhabitants are suffering the privation of fine and clean air.

The Boston Post announces a work on Iceland by the agreeable foreign correspondent of that paper. This country has just been opened to foreign trade. All goods enter the country duty free, and it will probably be treated with reciprocity treaties. All travel and transportation of goods, and the mail, through the interior, is on horseback. There is not a carriage road, a wheeled vehicle, a steam-engine, a post-office, a custom house, a police office, a fort, a soldier, or a lawyer in the whole country. The consequences of this state of things may be easily imagined. Goods are left of doors, unguarded, and being unattended and unprotected, it is but one prison in the island, and that was used once as an slave-house, but there were no poor to put in it.

REV. MR. PINNEY, agent of the American Colonization Society, in a recent address, stated that a gentleman at the South had already emancipated on one occasion sixty, on another seventy, and on a third one hundred slaves whom he was educating for freedom, and many of whom he has instructed in the manufacture of iron. He has just sent an agent to Liberia, to make arrangements for establishing a manufactory preparatory to the emigration of others from his country.

The Board of Trustees and faculty of Geneva College will hereafter confer the degree of A. B. Bachelor of Arts, and A. M. Master of Arts, on all young ladies as well as young gentlemen, who may complete the prescribed course of college studies. They say that the term bachelor in its proper sense does not signify, or at least does not always signify, an unmarried man, but that it applies to any one who can pass satisfactorily through the academic courses of sophomore, junior and senior; and that hereafter females as well as males, in Geneva College, shall be entitled to receive the degrees of A. B. and A. M.

A Great Blessing to the Afflicted.—The number and formidable character of diseases of the Liver have long challenged the attention of medical men. Some of the diseases classed under the general term of Consumption, have been supposed incurable and the unhappy patient allowed to die, without medical science to offer him a hope of recovery. Happily this can no longer be the case. A remedy has been found which will cure all complaints of whatever character, arising from derangement of the Liver. The Pills discovered by Dr. McLane, of Virginia, act directly on the Liver; and by correcting its operation and purifying it from disease, cuts off and exterminates the complaints which have their origin in the disease of the organ. Remedies hitherto proposed for liver complaints, have failed to operate upon the seat of the disease; but Dr. McLane's Pills made themselves felt upon the action of the Liver, and by cleansing the fountain, dry up the impure streams of disease which derive their existence.

Purchasers will be careful to ask for DR. McLANE'S CELEBRATED LIVER PILLS, and take none else. There are other Pills purporting to be Liver Pills now before the public. Dr. McLane's Liver Pills, also his Celebrated Vermifuge, can now be had at all respectable drug stores in the United States and Canada. Agents in Halifax, WM. LANGLEY and JOHN NAYLOR.

McLane's Pills, a most Excellent Remedy for a Disordered Liver and General Derangement of the System.—Mrs. Eliza Davies, of P. O. No. 1, near Carmarthen, was troubled for years with a disordered liver, which she described her system that it produced severe attacks of ague, and she became so susceptible of colds that she was seldom or ever free from them. She tried various remedies, but they all proved ineffectual. At length she was persuaded to take Holloway's Pills, which in a few days greatly benefited her, and finally restored her to perfect health. Mr. Treacher, druggist, Carmarthen, can certify to the truth of this statement.

Cauld lectures become scarce in a family where the Boston Chemical Washing Powder is used for cleaning purposes.

THE DESTRUCTION OF St. John's.—Information has been received at Boston of the destruction of St. John's, on the Margate Coast, by the U.S.S. Cass.—The town, situated there 12 1/2 miles, and on a high and rocky point, was destroyed by a volcanic eruption, which was the result of a volcanic eruption, which was the result of a volcanic eruption.
