

PRINCE EDWARD ISLAND.

The area of woodlands is given as 797 square miles, or 13,000 acres, of which about 10 per cent. contains timber of merchantable size. The timber is mainly spruce and balsam fir, with an intermingling of pine, hemlock, larch, cedar, maple, birch, ash, elm and oak.

As the forest lands are nearly all in private hands there are no official returns of the timber cut except those for the census year. According to the census of 1901 the cut of spruce was 3,048,000 feet board measure, while all other species brought up the amount to about 6,500,000. Hardwoods made a total of 315,192 feet board measure.

According to the Census of 1901 the following forest products were obtained on the Island in 1900:

		Quantity.	Value.	Quantity.	Value.
			\$		\$
Sawlogs...	Bbls.			5,884,000	49,139
Fir...	"	5,000	.48		
Hemlock...	"	410,000	3,114		
Hickory...	"	3,000	.40		
Oak...	"	5,000	.38		
Pine...	"	29,000	.377		
Spruce...	"	3,048,000	21,750		
Other species...	"	2,375,000	20,363		
Severe, waney or flat timber...	Cu. ft.			103,904	31,357
Ash...	"	3,767	.11
