29	Mon.	1	44	58	42	2 29	10 2			
30	Tues.	2	42	59	40	2 53	11 9			

SEPTEMBER.—Did you ever think of saving your soot? Perhaps not, for it is generally thrown away. Nevertheless, let me tell you, soot is one of the very best manures. It is extensively used in England, and when only fifteen or twenty bushels are applied to the acre, it induces the most luxuriant crops of wheat and other grains. Soot contains several sorts of ammonia, magnesia, lime, and muriatic acid. Its components are the natural food or stimulants of plants, and it can be used to great advantage as a concentrated fertilizer. Potatoes and carrots are especially benefited by it. Six quarts of soot to a large hogshead of water make an excellent liquid manure for the garden.
