

"I Doubled My Crops"

"With no fertilizer I raised 510 bushels of mangels per acre, with a low-grade fertilizer I raised 591 bushels, and with a 10% POTASH Fertilizer I raised 842 bushels."

JOHN A. RIGGS,
Merton, Ont.

"With my ground not fertilized I ordinarily raised 64½ bushels of corn, with a low-grade fertilizer I increased this to 103 bushels per acre, but with a proper 10% POTASH Fertilizer I still further increased this to 135 bushels per acre."

D. M. WINTER,
Thamesville, Ont.

"I raised 81 bushels of potatoes per acre on my farm with no fertilizer, with a low-grade fertilizer I increased this to 165 bushels, but with my 10% POTASH Fertilizer I brought this yield up to 204 bushels per acre."

G. E. FOSTER,
Honeywood, Ont.

"On our strawberry farm we raised 2,500 baskets per acre on unfertilized ground, with a low-grade fertilizer we raised 4,096 baskets, but with a complete 10% POTASH Fertilizer we increased this year to 6,341 baskets of strawberries."

E. W. ...
Glenora, Ont.

THIS is a story that can be told by hundreds of happy farmers in Canada who have used a 10% POTASH Fertilizer. One farmer in Nova Scotia who ordinarily raised a crop of 120 bushels of potatoes with no fertilizer, managed to raise 302 bushels with a low-grade fertilizer, but with a 10% POTASH Fertilizer he raised 442 bushels per acre off his land. We can tell you of many other cases just like this.

If you want to do the same on your farm, you must learn quickly that

POTASH PAYS

Every crop you raise takes from your land just so much nitrogen, phosphoric Acid and POTASH. This is the food the plants eat. You must help nature put back this plant food into your soil if you wish to raise good crops each year. You probably understand this, and it is likely you use some sort of fertilizer, but **if you are not using a 10% POTASH Fertilizer you are not getting the best crops from your land.** This is because every plant eats three times as much POTASH as it does phosphoric acid. Ordinary low-grade fertilizers contain from 6 to 8% phosphoric acid and but 2% POTASH. Certainly this is not three times as much POTASH. Therefore, you want to raise this percentage to 10% of POTASH.

If **YOU** want to raise a bumper crop this year, do this: Insist that your dealer provide you with a 10% POTASH Fertilizer. If he cannot do this, and you have to buy a low-grade fertilizer, add enough POTASH to it to raise it to 10% POTASH. We will tell you exactly how to do this, free. You can mix your own fertilizer at home if you want to, and our experts will tell you how to do this too, without charge.

Get in touch with your fertilizer dealer **NOW**, so that he will be sure to have POTASH on hand for you when you need it. Send us your dealer's name, and we will send you a free booklet telling how to properly raise the kind of crops you deal in. It is written by some of the very best agricultural experts in the world, and will surely be of great interest to you. Simply write us, stating your dealer's name and telling us the kind of crops you raise.

If you want your POTASH now, and your dealer has not got it, we will sell it to you direct. Simply let us know your requirements. The main thing to do is to

ACT NOW. Write us to-day.
