

Sectional View of Lubricator Body.

Another Step Toward Efficiency

The Detroit Automatic Flange Lubricator is just another step toward efficiency expressed in dollars and cents. Its use means a direct saving in increased wear for your tires. Its installation means no extra work for the man in the cab. The

Detroit Automatic Flange Lubricator

gives efficient flange lubrication just when it is needed; the feed is governed entirely by the requirements of the service.

The New Detroit Flange Lubricator consists of an oil reservoir and a feed nozzle on the flange; between these is the lubricator body with a ball valve controlling the feed of oil from the tanks to

the flange. The lateral thrust of the engine moves the ball "B," against the plunger "P," this opens valve. This allows oil to reach the flange.

Its use means another step toward efficiency. For the inside facts, write for Catalogue FO-81. A request letter will bring a copy.
