

The above cut shows the *Direct* and *Indirect* attachment applied from *Back* of Radiator; also *Course* of *Fire Travel* around air heating columns to smoke pipe.

The Calorific Furnace

For Thorough and Efficient Heating Qualities, Quickness in Action and Economy in Fuel, it Cannot be Surpassed.

Economy in Fuel==An Abundance of Fresh Warm Air

The Hot Air columns have immense Fire Surfaces which overhang the fire. Thus all products of combustion come in direct contact with and completely surround them, making the largest amount of heating surface to each square foot of grate surface ever produced in a warm air heater.

The outer surface of the Air Columns are also heated by the smoke and gases passing to the smoke exit. In this way the maximum service of the fuel is obtained.

THE CALORIFIC is the most completely up-to-date and economical system of warm air heating before the Canadian public. Architects can assure their clients absolute satisfaction when they specify THE CALORIFIC.
