Export Contact:

Mr. Terry Summach, President

Flexi-Coil was established in 1950 to produce the Flexi-Coil land packer which was developed by the founder. Since then, the company has manufactured dry land grain farming equipment and has developed several innovative products on which it holds patents.

The new Models 1100 and 1600 Air Seeder contain the latest innovations in pneumatic seeding. Featured are a highly efficient fan, accurate metering, and uniformity of seed distribution. The simple design and relatively low price makes these machines the most cost effective method of seeding available.

Flexi-Coil's field cultivators and chisel plows are available with built-in flexibility that results in good ground-following characteristics. When operated with an air seeder, this flexibility allows for seed deposition at a uniform depth resulting in higher yields.

The harrow and packing equipment is used in seed bed preparation and after seeding to conserve moisture, reduce air pockets and thus increase the germination rate. These machines are widely used in Western Canada and in many parts of the world.

The field sprayers are 18.9-29 cm (62 to 96 inches) in width, can be folded and unfolded from the tractor seat, have adjustable wheel tracking, and all liquid contact components are of high quality corrosion resistant materials.

All products are distributed in the United Kingdom and Western Europe by Flexi-Coil (U.K.) Ltd., Seaton Ross, York, England.

Products Available for Export

Chisel Ploughs
Cultivators and Weeders
Harrows, Scarifiers, Hoes
Deep Tillage Cultivators
Grain Drills and Air Seeders
Soil Packers and Land Rollers
