

Hist. Quad. N° 407.—Great Bat, *Br. Zool.* i. N° 38.

84. Noctulæ

BAT. With the nose slightly bilobated: ears small and rounded: on the chin a small wart: body of a cinereous red.

Extent of wings fifteen inches: body between two and three in length: tail, one inch seven-tenths.

Brought from *Hudson's Bay* in spirits. I saw it only in the bottle; but it appeared to be this species.

A. COMMON BAT, *Hist. Quad.* N° 411.—*Br. Zool.* i. N° 41.—*LEV. MUS.*

THIS species is found in *Iceland*, as I was informed by the late Mr. *Fleischer*, which is the most northernly residence of this genus. In *Asia* I can trace them no farther eastward than about the river *Argun*, beyond lake *Baikal*.
