

Two Sizes

14x18 Capacity, 3 to 4 tons per hour.

17x22 Capacity, 3½ to 5 tons per hour.

CASE BALING PRESSES

Don't overlook the profits you can make from baled hay. The markets insist on baled hay - it keeps clean and fresh - requires little storage space - can be handled and shipped easily and economically. Yes, there's profit if you choose a baling press that will do the work efficiently and economically. Do your own baling and then get the other baling jobs in your vicinity with a Case baler.

Case balers are built entirely of high grade steel. Hot riveted, sturdily built, rigid frame keeps all parts in line. Bearings for large crank gears are carried on heavy steel plates which prevent gears from spreading or getting out of mesh.

Top, bottom and side spring tensions allow bales to be made of desired weight.

Opening in bottom of bale chamber lets out all chaff and dirt, making clean looking bales.

Feeding arrangement permits big capacity. Hop-

per has deep sides which takes large forkfuls of material. We've got complete details that you should know about.

CASE SWEEP POWER BALER

For small farms the Case sweep power baler is ideal. It has a capacity of 1 to 2½ tons per hour and can be driven by one team. The baler has a self feeder which puts through 50 per cent. more hay than a man can feeding with hand and foot.

Send today for literature on Case Baling Presses.
