Creamery Department

Butter makers are invited to send contributions to this department, to ask questions on matters relating to butter making and to suggest subjects for discussion. Address letters to Creamery Department.

More Frequent Delivery

"A Maker," Middlesex Co., Ont.

I have frequently heard produce

men express their regret at the passing

of the old-time whole milk

creamery. They tell me that the

change to the hand separator and

cream collecting routes has resulted

in inferior butter. And they are

right.

Why is the butter made from

separator cream inferior to that made

from whole milk? The dirty separator

is probably a prolific source of

trouble. Infrequent delivery, I be-

lieve, is just as serious a defect in

our present system. In the old whole

milk creameries, the milk was de-

livered each day and separated in the

creamery. It was fresh cream that

was made into butter. Now with

the hand separator in operation on

every farm, the cream is delivered

only two or three times a week, in

most cases twice, and in some cases

in winter, only once.

Old cream goes spoiled flavor even

when well cared for, and we cannot

expect to make as good butter from

it as from fresh cream. Wherever

possible I would advise daily delivery.

In any case cream should be deliv-

ered three times a week.

Don't delay another day ordering an

Ideal Green Feed Silo

Don't put off ordering your silo thinking that there is plenty of time.

There has been such a demand for Ideal Green Feed Silos this year that some farmers who wait too long may get left.

Get your order placed now and your new silo up in time to take care of your corn.

You know you ought to have a silo, so what's the use of putting off ordering it a single day longer.

Thousands of successful owners are thankful for the day they erected an Ideal Green Feed Silo on their farms.

Our large, illustrated Silo Book contains much valuable information about silos and silage. Sent free upon request.

DE LAVAL DAIRY SUPPLY CO., LTD.

LARGEST AND OLDEST SILO MANUFACTURERS IN CANADA

MONTREAL PETERBORO WINNIPEG VANCOUVER

Join the Crowd

Feeding the Dairy Herd

(Continued from page 4)

dairy cow. We may say it will be able to grow alfalfa, but we can all grow clover. Feed as much as the cows will clean up. When the cows have eaten all the ensilage, grain and hay they want some roots can be fed in addition and to advantage.

I have mentioned these feeds in the order in which we feed them at Ottawa. In the morning we feed the ensilage and cut straw with the meal thrown on top and mixed in. Then we milk, after which the cows get a feed of hay. In the evening, the order is followed. The heavier producers get roots at noon. If fed, turnips are given just after milking.

This Outfit Was Made for You

THERE was a time when all farmers hitched up every other morning—part of the year every morning—and took their milk to the creamery. Today many of them use cream separators, because they find more advantages, fewer difficulties, and much profit in the modern way. Do you still plod the uncertain creamery route, or have you the efficient little team shown above at work for you? This outfit, an

I H C Cream Separator Dairymaid, Bluebell, or Lily

and a one-horse power back-gear I H C engine, will save you, in cream, from five to fifteen dollars per year on every cow milked, separate your milk and cream cleanly and thoroughly, and give you clean, fresh, warm skim milk to feed that will build up fat, healthy pigs and calves. I H C separators are the best separator bargains you can buy, because they will do better work and last longer than others.

Then the engine half of the team is always ready to pump water for you, run the grindstone, washing machine, sausage grinder, churn, and so on.

The I H C local agent will show you the outfit. Write for catalogues and full information to the

International Harvester Company of Canada, Ltd.
